

Sahara Net — Support Knowledge Base (Sample)

About Sahara Net

Sahara Net is a telecommunications and IT company based in Dammam, Saudi Arabia, offering hosting, cybersecurity, and cloud computing solutions since 1989.

Billing and Invoices

Invoices are generated automatically when a customer subscribes to a paid plan. Free plans are marked as paid automatically with no charge. Customers can view all their invoices from the My Invoices page in their dashboard. Refunds are handled case by case by the billing team within 5 to 10 business days.

Account and Login Issues

If a customer forgets their password, they can use the Forgot Password link on the login page to receive a reset email. Email changes require confirming the new address before the change takes effect, for security reasons. Accounts get suspended if payments are significantly overdue, and can be reactivated by contacting billing.

Technical Support

For SSL certificate issues, customers should check that their domain's DNS is pointed correctly and allow up to 24 hours for propagation. For hosting downtime, check the status page first; if the issue persists more than 15 minutes, escalate to the technical team immediately.

Sales and Plans

Sahara Net offers several plan tiers including Sahara ShortLinks, SaharaCaptcha, and the Sahara WhatsApp AI Agent. Customers can upgrade or downgrade their plan at any time from the My Subscription page. Enterprise customers should contact sales directly for custom quotes.

Cybersecurity

SaharaCaptcha protects websites from bots and spam using locally-hosted, Saudi-style interactive challenges. If a customer suspects their account was compromised, they should change their password immediately and contact the security team.
