

About Sahara Net | عن صحارى نت

Sahara Net is a leading Saudi provider of Information and Communications Technology (ICT) solutions, since its establishment in 1989, the company has rapidly expanded to offer a wide range of integrated corporate solutions, including connectivity, cloud services, cybersecurity, and data center management.

Vision: Empowering businesses to achieve the best return on investment.

Mission: To be the preferred global provider of Information and Communications Technology (ICT) solutions.

What Sets Us Apart

- 01-Over 30 years of leadership in delivering ICT and connectivity solutions.
- 02-Strategic partnerships with leading global technology and telecom providers.
- 03-A strong and extensive network covering most major cities across the Kingdom.
- 04-A continuous commitment to innovation and delivering reliable, flexible solutions tailored to evolving market needs.

صحارى نت تعرف على

صحارى نت هي الشركة الرائدة في مجال الاتصالات وتقنية المعلومات في السوق السعودية، حيث تأسست عام 1989 لتقديم حلول متكاملة في الربط، الأمن السيبراني، والحوسبة السحابية. تغطي شبكة صحارى نت معظم المدن الرئيسية في المملكة، وتعد صحارى من أوائل الشركات في السوق التي قدمت ميزة الناقل المحايد باستخدام شبكات مزودي البيانات المختلفة.

الرؤية: تمكين الشركات من تحقيق أعلى عائد على الاستثمار من خلال حلول تكنولوجيا المعلومات والاتصالات المبتكرة والموثوقة.

، وأن نقود التحول الرقمي والنجاح (ICT) الرسالة: أن نكون المزود العالمي المفضل لحلول تكنولوجيا المعلومات والاتصالات، للمؤسسات في جميع أنحاء العالم.

ما يميزنا

- 01- أكثر من 30 عامًا من الريادة في تقديم حلول الاتصالات وتقنية المعلومات.
- 02- شراكات استراتيجية مع كبرى شركات التقنية والاتصالات العالمية.
- 03- شبكة قوية وواسعة تغطي معظم المدن الرئيسية في المملكة.
- 04- التزام دائم بالابتكار وتقديم حلول موثوقة ومرنة تلبي احتياجات السوق المتغيرة.

Meet Our Board of Directors

Nawar Mohammed Bu-Aisha

Chairman of the Board

Nawar Bu-Aisha serves as Vice President of the Corporate Banking Department at Riyadh Bank. He also represents Riyadh Capital in the general assemblies of several publicly listed companies on the Saudi stock exchange.

With a career at Riyadh Bank that began in 1996, Nawar has held numerous leadership roles. He holds a bachelor's degree from King Fahd University of Petroleum and Minerals (1994) and a master's degree in business administration – Islamic Banking from the University of Terbuka (2011).

Mohammed Abdulkarim Al-Khereiji

Vice Chairman of The Board

Mohammed Al Khereiji is the CEO of Khereiji Group and has been a leading figure in the insurance, industrial, and media sectors for over two decades.

He serves on the boards and committees of several prominent companies, including Chubb Arabia Cooperative Insurance, Al Khereiji Trading and Electronics, Dar Al Youm for Press and Publishing, Arab Paper Manufacturing Company, and Saudi Cement Company.

He holds a bachelor's degree in management information systems from California State University (2003) and professional certifications from the Saudi Financial Academy and the Bahrain Institute of Banking and Finance.

Haitham Mohammed Bu-Aisha

Managing Director

Haitham Bu-Aisha is a visionary entrepreneur and Founding Partner of Sahara Net. He has led the company's executive operations since its establishment and is also a Founding Partner of Vision Ventures.

His previous experience includes serving as General Manager at Al Nawras for Trade and Industry (1988–2000). Haitham has held several leadership roles in the Eastern Province Chamber, including Chairman of the Communications and IT Committee.

He holds a degree in Information Systems Management from King Fahd University of Petroleum and Minerals.

Kais Abdulhameed Al-Essa

Board Member

Kais Al Essa is a Founding Partner and Vice President of Marketing and Sales at Sahara Net, as well as a Founding Partner at Vision Ventures.

He has contributed significantly to the region's digital transformation through his roles in the Middle East Network Operators Group (MENOG) and the Communications and IT Committee at the Eastern Province Chamber.

Kais holds an Executive MBA (2016) and a bachelor's degree in computer engineering (1994), both from King Fahd University of Petroleum and Minerals.

Basil Abdullah Al-Baeijan

Board Member

Basil Al Baeijan brings over 30 years of experience in telecommunications and IT. He has held senior leadership positions, including Vice President of Operations and Technical Support at Sahara Net and Executive Director of ICT at Saudi Electricity Company.

Basil earned his bachelor's degree in computer science from Central State University in Oklahoma City (1989). He is an active contributor to industry committees, including the Saudi Computer Society and technical committees within Saudi Electricity Company.

Why Sahara Net Service?

Sahara Net is a leading Information and Communications Technology (ICT) Provider in the Saudi market. The company has rapidly grown since 1989 to offer comprehensive corporate solutions. Sahara Net's extended network covers most of the major cities in the Kingdom. We are the only "Carrier Neutral" provider in the market utilizing all the active Data Service Providers networks to enable us to offer customers the very best levels of support and high-quality services we have chosen to partner with some major IT and Telecom players around the world.

Why Sahara Net

Integrated Solutions for Businesses Under One Roof: We provide all the technical solutions businesses need in one place, making it easy for you to get everything you require without dealing with multiple providers.

Direct Interaction with Data Service Providers: We work directly with data service providers to ensure service stability and reliability, while minimizing reliance on third parties.

Full Transparency in Service: We offer clear service status updates on our website, allowing you to continuously monitor the progress of your project with no ambiguity.

Service Level Agreement (SLA): We sign agreements with clients to guarantee that services are delivered according to agreed-upon standards and timelines, enhancing trust and commitment.

Try Services Before Purchase: Trial access is available for a range of selected services, giving you the opportunity to assess their alignment with your needs prior to purchase.

Offices in Major Regions of Kingdom of Saudi Arabia: With offices and dedicated sales and engineering teams across multiple regions of the Kingdom, we ensure exceptional support and service delivery at every level.

Local Data Centers: We own local data centers, enabling you to benefit from fast and secure hosting and cloud computing services.

24/7 support: Our engineers are trustworthy, dedicated and experienced and will go the extra mile to solve your issues 24/7.

لماذا صحارى نت؟

صحارى نت هي الشركة الرائدة في مجال الاتصالات وتقنية المعلومات في السوق السعودية، حيث تأسست عام 1989 لتقديم حلول متكاملة في الربط والاتصال، الأمن السيبراني، والحوسبة السحابية. تغطي شبكة صحارى نت معظم المدن الرئيسية في المملكة، وتعد الناقل المحايد الوحيد في السوق باستخدام شبكات مزودي البيانات المختلفة. عقدنا شراكات استراتيجية مع أبرز الشركات العالمية في مجال الاتصالات وتقنية المعلومات لنقدم لعملائنا أفضل مستويات الدعم وحلولاً ذات جودة عالية.

مزايا خدمات صحارى نت

نوفر مجموعة شاملة من الخدمات التقنية تلبي احتياجات الشركات من مختلف القطاعات: **حلول متكاملة تحت سقف واحد**

نعمل بشكل مباشر مع مزودي خدمات البيانات لضمان استقرار الخدمة وموثوقيتها، **تتعامل مباشرة مع مزودي خدمات البيانات** مع تقليل الاعتماد على الأطراف الخارجية.

نلتزم بالوضوح في تقديم خدماتنا، مع تحديثات دورية عبر موقعنا الإلكتروني: **شفافية تامة**

تضمن لك الحصول على خدمة متكاملة وموثوقة: **(SLA) اتفاقية مستوى الخدمة**

نتيح لك تجربة مجموعة محددة من خدماتنا لتتأكد من مدى ملاءمتها لك قبل اتخاذ قرار الشراء: **تجربة قبل الشراء**

مكاتبنا موزعة في مختلف مناطق المملكة العربية السعودية لتكون اقرب: **انتشار محلي واسع**

بنية تحتية متطورة لاستضافة آمنة وخدمات حوسبة سحابية بجودة عالية: **مراكز بيانات محلية**

فريق دعم متخصص متاح 7/24، مع إدارة حسابات شخصية لضمان استجابة سريعة وفعالة لكل: **دعم فني على مدار الساعة** احتياجاتك.

يتم التفعيل تلقائياً فور الدفع عبر الموقع.

مراكز البيانات | Data Centers

About The Service

Sahara Net's Tier III data centers provide a secure, high-performance environment for businesses seeking reliability, scalability, and compliance. With advanced infrastructure and local expertise, we ensure your critical systems run seamlessly so you can focus on your growth.

Reliability: Redundant power and connectivity ensure continuous uptime.

Performance:Optimized cooling systems for maximum hardware efficiency.

Security:24/7 surveillance, biometric access, and cyber protection.

Scalability:Easily expand your space and resources as your business grows.

Expert Support:On-site engineers and 24/7 monitoring for peace of mind.

Infrastructure & Certifications

- Location : Riyadh, Al-Rawabi District
- Tier Classification: Tier III (N+N) certified — future-ready for Tier IV Data Centers
- Certifications: SOC 1, SOC 2, SOC 3, PCI DSS, ISO 9001, ISO 20000, ISO 27001, ISO 27701, TCCF & TCDD
- Power & Cooling: N+2 redundancy, precision climate control
- Security: 24/7 surveillance, biometric access, fire suppression

Service Offerings

- 1 Rack Rental & White Space:Flexible hosting options for enterprises.
- 2 Business Continuity & Disaster Recovery:Keep operations running during disruptions.
- 3 Remote Hands & Migration Support:Expert technical assistance on-site.
- 4 Dedicated Internet Connectivity:High-speed, redundant network access.

Colocation Models

Retail Colocation

Shared environments with dedicated racks/cabinets—perfect for SMBs needing enterprise reliability without large footprints.

Wholesale Colocation

Dedicated halls or suites with custom power and cooling—built for enterprises and telecom operators.

Hybrid Cloud Colocation

Combine colocation with cloud resources for flexible, cost-efficient scaling and low-latency interconnects.

Why Sahara Net

30 + Years of ICT excellence.

99.99 % Uptime guarantee & SLA-backed transparency.

6 + Global Certifications, Local data Standards.

24 /7 Support via a toll-free 800 call center.

الأمن السيبراني | Cybersecurity

What Services Does Sahara Net Offer for Institutions and Companies?

Our solutions are based on our extensive experience and strong partnerships with leading global Cybersecurity providers. Sahara Net offers professional assistance and consultation in this critical field of cybersecurity.

Consulting: Eliminating the weakest link in the Cybersecurity chain, human factor risk.

Protection: Safeguarding your infrastructure up to layer 7.

Detection: Ensuring you have a highly secure environment.

Managed Services: Enhancing your security posture with managed services.

Security Operation Center (SOC)

Location: Dammam

The Cybersecurity Operations Center (SOC) service provides you with 24/7 support from our team of security analysts who continuously monitor all events reaching the SIEM system. By collecting event logs from the devices included in the assessment phase, these logs are processed and correlated with security threats to identify any signs of intrusion.

What is included

Managed Information Security

- SOC Monitoring
- Incident Management
- Security Event Monitoring
- SOAR - Security Orchestration, Automation, and Response
- UEBA - User and Entity Behavior Analytics
- Intrusion Detection
- Digital Forensics and Incident Response (DFIR)

Why us?

Services from Sahara Net?

1. Licensed by CST and listed as a SOC provider by the National Cybersecurity Authority.
2. The Cyber Security Operations Center is certified with ISO 27001, ISO 9001, and cloud certifications ISO 27017, ISO 27018, CSA Star L2, and PCI DSS.
3. Compliant and audited by Saudi regulatory bodies such as the Saudi Central Bank (SAMA), the National Cybersecurity Authority (NCA), and CST.
4. Benefit from a Long-Term solution
5. Managed by a highly skilled team with Top-Level training certifications.
6. Robust setup with disaster recovery and business continuity in Riyadh.
7. Compliant and audited by Saudi regulatory bodies such as the Saudi Central Bank (SAMA), the National Cybersecurity Authority (NCA), and CST.
8. Avoid breaches in your organization by being informed about new attacks.
9. Access security expertise and a dedicated workforce.

الدمام - مركز عمليات الأمن السيبراني

الذي يعمل على مدار الساعة طوال أيام الأسبوع وعلى مدار السنة (SOC) ستوفر لك خدمة مركز عمليات الأمن السيبراني من خلال جمع سجلات الأحداث من SIEM بواسطة فريق محلي يراقبون باستمرار جميع الأحداث التي تصل لنظام الأجهزة التي تم تضمينها في مرحلة التقييم، يتم معالجة سجلات الأحداث و ربطها ضد التهديدات الأمنية بحثاً عن أي علامات اقتحام.

الخدمات المدارة ماذا تشمل

- مراقبة مركز عمليات الأمن السيبراني
- إدارة الحوادث الأمنية
- مراقبة الأحداث الأمنية
- منصة تنسيق الاستجابة الأمنية
- مراقبة سلوك المستخدم والكيانات
- كشف التسلات
- التحليل الجنائي الرقمي

Security Detection

What We Offer

01:Penetration Testing

Perform ethical hacking and offensive security to evaluate the security of an IT infrastructure by safely attempting to exploit vulnerabilities.

02:Vulnerability Assessment

Scan your organization's infrastructure, including servers, workstations, devices, operating systems, and other applications, to detect and identify vulnerabilities (without exploitation).

03:Source Code Review

The strong point of source code review is its ability to identify encryption errors, including weak encryption algorithms and inadequate implementations of those algorithms.

04:Mobile Applications Testing

Mobile application testing is to ensure your applications are high quality and user adoption; comprises functional, compatibility, performance, security testing.

05:Configuration Assessment

it is a comprehensive review of cybersecurity configurations on numerous devices i.e network devices, security controls, operating systems, and databases to ensure that they are secure against potential threats.

اكتشاف - خدماتنا

ماذا نقدم في صحارى نت؟

01اختبار الاختراق

قم بإجراء اختبار اختراق أخلاقي لتقييم أمان بنية تكنولوجيا المعلومات من خلال محاولة استغلال نقاط الضعف بشكل آمن

02تقييم الثغرات

قم بفحص بنية مؤسستك التحتية، بما في ذلك الخوادم، أجهزة المستخدمين، أنظمة التشغيل، والتطبيقات الأخرى، لاكتشاف وتحديد نقاط الضعف (بدون استغلال).

03مراجعة كود المصدر

النقطة القوية في مراجعة كود المصدر هي القدرة على تحديد أخطاء التشفير، بما في ذلك الخوارزميات الضعيفة أو تلك التي تعاني من تنفيذ غير كافٍ.

اختبار تطبيقات الهواتف الذكية 04

اختبار تطبيقات الهاتف المحمول يهدف إلى ضمان جودة التطبيقات العالية واعتماد المستخدمين لها، ويتضمن اختبارات الوظائف، التوافق، الأداء، والأمان.

مراجعة إعدادات الأنظمة 05

هو فحص شامل لإعدادات الأمن السيبراني على العديد من الأجهزة، مثل أجهزة الشبكة، ضوابط الأمان، أنظمة التشغيل، وقواعد البيانات؛ وذلك لضمان أنها مؤمنة ضد التهديدات المحتملة.

✓.جهة متواجدة فعلاً في المملكة العربية السعودية

.شخص طبيعي يحمل هوية وطنية سعودية أو إقامة مميزة

.جهة مرخص لها من جهة مختصة في المملكة العربية السعودية بممارسة نشاطها

.مالك لعلامة تجارية أو اسم تجاري مسجل في المملكة العربية السعودية

نقل النطاق | Transfer Domain

Why Is It Important to Move Your Saudi Domain to Sahara Net ?

If your current domain provider doesn't offer you the prices, support and service you need, and you just want to merge your property or see that it's time for a change, we can help.

There are more than 84 million registered domains around the world, and in the midst of so many we at Sahara Net will know how to take care of your ranges because we have leading experience in this field.

Our goal is to simplify the process as much as possible so you can focus on the most important things in your life.

General Tansfer Rules

Sixty-Day Lock:Transfer of a domain name from one Registrar to another is prohibited within the first sixty (60) days of the domain name being registered, and is also prohibited within (60) days of the last implemented registrar transfer request.

Sixty-Day Transfer Lock:Transfer of a domain name from one Registrar to another is prohibited within the first sixty (60) days of the domain name being registered, and is also prohibited within (60) days of the last implemented registrar transfer request.

SaudiNIC's Authority:All transfer requests shall be subject to review by SaudiNIC, and SaudiNIC retains the right to review any request prior to, or following completion of the transfer process. SaudiNIC also retains the right to require any additional documentation at its own discretion.

SaudiNIC's Authority Over Transfers:All transfer requests shall be subject to review by SaudiNIC, and SaudiNIC retains the right to review any request prior to, or following completion

of the transfer process. SaudiNIC also retains the right to require any additional documentation at its own discretion.

Mandatory Renewal:The transfer process include a renewal fees at least for one year up to 10 years based on registrant choice. The renewal fees will be according to registrar price.

Mandatory Renewal:The transfer process include a renewal fees at least for one year up to 10 years based on registrant choice. The renewal fees will be according to registrar price.

Expiration Date:A domain name may not be transferred from one Registrar to another, if the expiration date of the domain name's registration is within five (5) days.

Expiration Date:A domain name may not be transferred from one Registrar to another, if the expiration date of the domain name's registration is within five (5) days.

No Extra Fees Allowed:The Registrar is not permitted to impose any extra fees for the transfer except the renewal fees..

What Are the Steps to Move Your Saudi Domain to Sahara Net?

Get Data Ready: Ask your current registration agent to provide your domain verification code/transfer key

Take Action:Through our website go to the cloud computing page - Saudi domain - transfer your domain to us

Verify:Place the domain name and verification code and then press the verification button, to verify the validity of the code

Add to Cart: Click on the option to add to the cart after agreeing to the terms and conditions

Pay:Complete the transfer steps and choose the payment method (PayPal, credit card or payment)

Wait for Approval: After the invoice is paid, a verification letter will be sent to the Domain Managing Coordinator for approval of the transfer by Sahara Net and also by the registration agent transferred from it

What Makes Transferring Your Saudi Domain to Sahara Net Unique?

Automatic Process, No Technical Skills Required

Our transportation process is automated, fast and risk-free, so you'll be up to date and on the job quickly. This means that moving your domain to us often happens behind the scenes, leaving you more time to focus on what's most important.

Centralized Management of Multiple Domains

If you run multiple domains, making them centralized through a single service provider will make your life simpler. We simplify that process and make it without pressure

Easy Management with Sahara Net

Do you want sub-ranges? Would you like to redirect? We do all that and more. In addition, our domain management tools are easy and clear to everyone.

Constant Updates

We monitor your domains in real time to make sure your site works and runs permanently.

Online & Sadad Payment Options

Sahara Net is the authorized agent for the transfer of the Saudi domain.

Support for Electronic Payment Systems

Electronic payment with SADAD, Mada Card, Payment, Visa, and Mastercard.

How Do I Register a New Domain?

- 1-Via Sahara Net, please click on the cloud computing page – Saudi Domain – Domain Registration
- 2- Make sure that the required domain is available and that an account is registered on site
- 3- The form is then filled out and the required documents are attached
- 4- A domain administrative coordinator is identified and verified by text message and email.
- 5- After payment, domain eligibility will be verified within 24 hours if the domains (com.sa, sa., net.sa, pub.sa.) and in the case of domains (sch.sa, med.sa, org.sa, .edu.sa) the domain must be approved by the Saudi Network Information Center.

What Documents Are Required to Register a New Domain?

To register a new domain, official documents supporting domain name registration must be attached to one of the following documents:

1. The commercial Register.
2. A brand.
3. License from an accredited government side.
4. Certificate of agency registration

5. National identity/residence of personal domains.

What Are the Payment Methods in Sahara Net?

You can pay through the following payment methods:

1. Sadad
2. Mada
3. Credit Card
4. PayPal

Will My Website Be Affected by the Transfer?

Your domain transfer takes place without affecting your services.

How Do I Manage My Domain?

Your domains are easily controlled by your account (shop.sahara.com)

أحصل على نطاق سعودي مجاني (للسنة الأولى فقط): نطاق سعودي مجاني.

دعم العملاء باللغتين العربية والإنجليزية على مدار الساعة: دعم العملاء.

العمل في بيئة صحية وشفافة لتعزيز جهود فريق العمل: حماية مستمرة على مدار الساعة.

نوفر حلول آمنة ومتوافرة لتخزين قاعدات البيانات تخزين قاعدة البيانات.

تحكم بالإعدادات للنطاقات المسجلة في صحارى نت من خلال نقرة واحدة تحكم بالإعدادات بنقرة واحدة.

لوحة تحكم مرنة وسهلة الاستخدام المرونة.

مزايا الإستضافة المشتركة

من المزايا الرئيسية فعاليتها من حيث التكلفة والقدرة على تحمل التكاليف.

خدمات مُدارة شاملة لضمان تشغيل موقع الويب الخاص بك بسلاسة.

Sahara Net Dedicated Servers

A dedicated server is a physical server that is purchased or rented entirely for your own business needs. Dedicated servers are typically used by large businesses and organizations that require exceptionally high levels of data security, or organizations that have steady, high demands for server capacity.

With dedicated servers, businesses still need the IT capacity and expertise to manage ongoing maintenance, patches and upgrades. Businesses using I/O-heavy applications, such as databases and big data platform.

المخصصة خوادم صحاري نت

ال خادم المخصص هو خادم فعلي يتم شراؤه خصيصاً لتلبية احتياجات عملك. غالباً ما تستخدمه الشركات والمؤسسات الكبيرة التي تتطلب مستويات عالية جداً من أمان البيانات، أو المؤسسات التي تحتاج إلى سعة خادم ثابتة وعالية. على الرغم من ذلك، فإن الشركات التي تستخدم الخوادم المخصصة بحاجة إلى فريق من محترفي تكنولوجيا المعلومات لإدارة الصيانة المستمرة، بالإضافة إلى التعامل مع التصحيحات والتحديثات. كما أن الخوادم المخصصة تعد مثالية للمؤسسات التي تستخدم تطبيقات ذات متطلبات إدخال/إخراج ثقيلة، مثل قواعد البيانات ومنصات البيانات الضخمة.

الخادم الافتراضي الخاص | Virtual Private Server (VPS)

- What is a Virtual Private Server (VPS)?

A Virtual Private Server (VPS) is a virtualized server environment hosted on a powerful physical machine. Using advanced virtualization technology, a single physical server is divided into multiple isolated virtual servers, each with its own dedicated CPU, RAM, storage, and operating system.

This gives businesses the power and flexibility of a dedicated virtual server at a much more affordable cost.

- The Power of Virtualization

Virtualization allows companies to maximize the efficiency of their hardware by running multiple independent server environments on a single virtual server. This reduces infrastructure costs, improves resource utilization, and enables rapid scaling.

With virtualization, businesses gain the ability to deploy applications faster, enhance system reliability, and optimize IT operations without investing in additional physical hardware.

- What does VPS provide to your company?

A VPS provides your company with a secure, flexible, and high-performance cloud environment.

It allows your teams to deploy applications, host websites, run databases, and manage internal systems with dedicated computing resources.

Unlike shared hosting, a VPS ensures stability, privacy, and predictable performance making it ideal for growing businesses, developers, and enterprise workloads.

- Advantages of Sahara VPS

Choosing Sahara VPS gives your organization a robust infrastructure designed for reliability and performance. Key advantages include:

- Dedicated Resources: Guaranteed CPU, RAM, and storage for consistent performance.
- High Security: Isolated environments protect your data and applications from external threats.
- Scalability: Easily upgrade resources as your business grows.
- Cost Efficiency: Enjoy the power of a dedicated environment at a fraction of the cost.
- Local Infrastructure: Faster performance and lower latency through Saudi based data centers.
- Full Control: Root/administrator access for complete customization and configuration

ما هو الخادم الافتراضي الخاص (VPS)؟

هو بيئة خادم افتراضية يتم استضافتها على جهاز خادم فعلي عالي الأداء. باستخدام (VPS) الخادم الافتراضي الخاص التقنيات الافتراضية المتقدمة، يتم تقسيم خادم واحد إلى عدة خوادم افتراضية مستقلة، بحيث يمتلك كل خادم موارده الخاصة، التخزين، ونظام التشغيل (RAM)، الذاكرة (CPU) مثل المعالج.

يوفر ذلك للشركات قوة ومرونة الخوادم المخصصة ولكن بتكلفة أقل.

إمكانيات التقنية الافتراضية

تتيح التقنيات الافتراضية للشركات الاستفادة القصوى من موارد الأجهزة من خلال تشغيل عدة بيئات خوادم مستقلة على نفس الخادم الفعلي. وهذا يساهم في:

- تقليل تكاليف البنية التحتية
- تحسين كفاءة استخدام الموارد
- إمكانية التوسع السريع عند الحاجة

كما تمنح الافتراضية الشركات القدرة على نشر التطبيقات بشكل أسرع، وتعزيز موثوقية الأنظمة، وتحسين إدارة عمليات تقنية المعلومات دون الحاجة للاستثمار في أجهزة إضافية.

لشركتكم؟ VPS ماذا يوفر

بيئة سحابية آمنة، مرنة، وعالية الأداء تمكن شركتكم من VPS يوفر

- نشر وتشغيل التطبيقات
- استضافة المواقع الإلكترونية
- إدارة قواعد البيانات
- تشغيل الأنظمة الداخلية

استقراراً أعلى، وخصوصية أكبر، وأداءً مستقرًا، مما يجعله الخيار المثالي VPS وعلى عكس الاستضافة المشتركة، يضمن للشركات المتنامية والمطورين والأنظمة المؤسسية.

مزايا الخادم الافتراضي من صحارى نت

عند اختيارك لـ الخوادم الافتراضية من صحارى نت، ستحصل على بنية تحتية قوية مصممة لتحقيق أعلى مستويات الأداء والاعتمادية، وتشمل المزايا

- معالج وذاكرة وتخزين مضمونة لأداء ثابت: موارد مخصصة
- بيئة معزولة تحمي بياناتك وتطبيقاتك: أمان عالي
- إمكانية ترقية الموارد بسهولة مع نمو أعمالك: قابلية التوسع
- أداء الخوادم المخصصة بسعر اقتصادي: كفاءة في التكلفة
- سرعة أعلى وزمن استجابة أقل عبر مراكز بيانات داخل المملكة: بنية تحتية محلية
- لإدارة وتخصيص الخادم بالكامل Root / Administrator صلاحيات: تحكم كامل

Azure Stack Hub

Azure Stack Hub is an extension of Azure that provides a way to run apps in an on-premises environment and deliver Azure services in your datacenter. With a consistent cloud platform, organizations can confidently make technology decisions based on business requirements, rather than business decisions based on technology limitations.

Benefits

key Features of Azure Stack Hub

Self-service portal (identical to public Azure Portal)

Multi-tenancy (using Azure AD, connected mode only)

Purpose built appliance (quick to deploy)

Marketplace (customizable)

PAYG billing (connected mode only)

Single point of contact for support

Compatible with public Azure – hybrid cloud

PaaS (shared DB, Azure App Services, Azure Functions)

Azure Stack Hub

في مركز البيانات الخاص Azure يوفر طريقة لتشغيل التطبيقات في بيئة محلية وتقديم خدمات Azure هو امتداد لـ Hub بك. من خلال النظام الأساسي السحابي المتسق، يمكن للمؤسسات اتخاذ قرارات تقنية بناءً على متطلبات العمل، بدلاً من قرارات العمل القائمة على قيود التكنولوجيا.

مزايا

Azure Stack Hub أهم مزايا

العام Azure مماثلة لمدخل) بوابة الخدمة الذاتية

، الوضع المتصل فقط ID Microsoft Entra باستخدام الإيجار المتعدد

جهاز مصمم لهذا الغرض (سريع النشر)

السوق (قابل للتخصيص)

الوضع المتصل فقط PAYG فواتير

(Azure ، وظائف Azure قاعدة بيانات مشتركة، خدمات تطبيقات) PaaS

Exchange As a Service

Exchange as a Service is a business class messaging service. Its hosted locally in Sahara Net Datacenter, allowing you to share calendars and book meeting rooms.

Why choose our service:

- 01 Includes email security as an add-on feature.
- 02 Complies with the data regulation of Saudi law.
- 03 Delivered as a fully managed solution with 24/7 support.
- 04 Guaranteed service level and predictable monthly costs.

05 5 GB mailbox standard size, flexible to scale up.

06 Business-class email.

07 Significantly lower total cost of ownership for your messaging and collaboration needs

كخدمة Exchange إيميل

كخدمة هي خدمة مراسلة في فئة الأعمال. يتم استضافته محلياً في مركز بيانات صحاري نت، مما يتيح لك Exchange إيميل مشاركة الأجنحة وحجز غرف الاجتماعات.

01 . يتضمن أمان البريد الإلكتروني كميزة إضافية

02 . الالتزام بلائحة البيانات في القانون السعودي

03 . يتم تقديمها كحل مُدار بالكامل مع دعم على مدار الساعة طوال أيام الأسبوع

04 . مستوى خدمة مضمون وتكاليف شهرية يمكن التنبؤ بها

05 . يبلغ حجم صندوق البريد 5 غيغابايت كخيار قياسي، مع إمكانية التوسيع حسب الحاجة

06 . بريد إلكتروني خاص بدرجة رجال الأعمال

07 . تكاليف إجمالية أقل بكثير لتلبية احتياجاتك من البريد الإلكتروني والتعاون

Hosted Dedicated Exchange Server

Provides high-performance server options with Intel Xeon CPU.

Provide single Exchange server, High Availability and Hybrid deployment scenarios.

Self-managed dedicated server or paid server management services.

24/7 support services with operations and management of IT Infrastructure.

استضافة خادم تبادل مخصص

Intel Xeon CPU يوفر خيارات خادم عالية الأداء مع

توفير خادم تبادل فردي وسيناريوهات عالية التوفر والنشر المختلط

خادم مخصص مُدار ذاتياً أو خدمات إدارة خادم مدفوعة

خدمات دعم 7/24 مع عمليات وإدارة البنية التحتية لتكنولوجيا المعلومات

Azure Global

Sahara Net offers Microsoft Azure, which is a cloud computing platform with an ever expanding set of services to help you build solutions to meet your business goals. Azure Global services range from simple web services for hosting your business presence in the cloud, to running fully virtualized computers for you to run your custom software solutions. Azure provides a wealth of cloud-based services like remote storage, database hosting, centralized account management, and new capabilities like artificial intelligence and Internet of Things (IoT).

العالمية Azure

، وهي عبارة عن نظام أساسي للحوسبة السحابية مع مجموعة دائمة التوسع من Microsoft Azure تقدم صحاري نت من خدمات الويب البسيطة لاستضافة وجود Azure الخدمات لمساعدتك في بناء حلول تلبي أهداف عملك. تتراوح خدمات Azure عملك في السحابة إلى تشغيل أجهزة كمبيوتر افتراضية بالكامل لتشغيل حلول البرامج المخصصة الخاصة بك. يوفر مجموعة كبيرة من الخدمات المستندة إلى السحابة مثل التخزين عن بُعد، استضافة قاعدة البيانات، إدارة الحساب المركزية (IoT) والإمكانات الجديدة مثل الذكاء الاصطناعي وإنترنت الأشياء.

Microsoft 365

Sahara Net: Your Comprehensive Microsoft Partner

Elevate your business with seamless collaboration. Experience the power of unified solutions with Sahara Net. As a trusted Microsoft partner, we offer a comprehensive range of products and services to meet your organizational needs.

Microsoft 365

- Office Apps: This includes the familiar suite of applications like Word, Excel, PowerPoint, Outlook, and OneNote.
- Cloud Storage: OneDrive provides cloud storage for files, allowing access from any device.
- Collaboration Tools: Microsoft Teams facilitates real-time communication, collaboration, and file sharing.
- Additional Services: Depending on the plan, you might get access to other services like Microsoft Exchange, SharePoint, and Skype.

Windows 365

Experience the future of work with Windows 365. Access your desktop from anywhere, on any device.

- Windows 365 Business: Ideal for small businesses seeking simple management and ready-to-use Cloud PCs.
- Windows 365 Enterprise: Tailored for larger organizations with advanced customization and management options.

AI-Powered Productivity

Enhance your team's efficiency with Microsoft Copilot. This AI-powered tool integrates seamlessly with Microsoft 365 apps, providing intelligent assistance for tasks like writing, editing, and data analysis.

صحارى نت :شريكك الشامل مع مايكروسوفت...

ارفع مستوى عملك من خلال التعاون السلس. جرب قوة الحلول الموحدة مع صحارى نت. بصفتنا شريكًا موثوقًا به لمايكروسوفت ، فإننا نقدم مجموعة شاملة من المنتجات والخدمات لتلبية احتياجات مؤسستك.

مايكروسوفت 365

- Word وExcel وPowerPoint وOutlook يتضمن ذلك مجموعة التطبيقات المألوفة مثل: تطبيقات الأوفيس وOneNote.
- تخزينًا سحابيًا للملفات، مما يسمح بالوصول من أي جهاز OneDrive يوفر: التخزين السحابي.
- الاتصال والتعاون ومشاركة الملفات في الوقت الفعلي Microsoft Teams يسهل: أدوات التعاون.
- Microsoft اعتمادًا على الخطة، قد تحصل على إمكانية الوصول إلى خدمات أخرى مثل: خدمات إضافية Exchange وSharePoint وSkype.

ويندوز 365

جرب مستقبل العمل مع ويندوز 365. يمكنك الوصول إلى سطح المكتب من أي مكان وعلى أي جهاز.

- مثالي للشركات الصغيرة التي تبحث عن إدارة بسيطة وأجهزة كمبيوتر سحابية جاهزة: Business ويندوز 365 للاستخدام.

- مصمم خصيصًا للمؤسسات الأكبر مع خيارات التخصيص والإدارة المتقدمة Enterprise: ويندوز 365

الإنتاجية المدعومة بالذكاء الاصطناعي

تتكامل هذه الأداة المدعومة بالذكاء الاصطناعي بسلسلة مع تطبيقات Copilot. عزز كفاءة فريقك باستخدام مايكروسوفت مايكروسوفت 365، مما يوفر مساعدة ذكية لمهام مثل الكتابة والتحرير وتحليل البيانات.

النسخ الاحتياطي والتعافي من الكوارث | Backup and DR

Backup Services

Data backup has become essential for businesses across various industries. Sahara Net offers comprehensive solutions to safeguard your critical information. We provide two primary options:

- 1 On-site within our data center
- 2 cloud-based through global partners like Acronis and Microsoft.

DR Services

Sahara Net offers Disaster Recovery as a Service (DraaS), a cloud computing service model that enables clients to back up their data and IT infrastructure in our data centers. Our solution includes full DR orchestration through a SaaS platform, allowing clients to quickly regain access and restore functionality to their IT infrastructure after a disaster.

النسخ الاحتياطي

أصبح النسخ الاحتياطي للبيانات ضروريًا للشركات في مختلف الصناعات. نحن نقدم حلول نسخ احتياطي شاملة لحماية معلوماتك المهمة. نحن نقدم خيارين أساسيين:

- 1 النسخ الاحتياطي في الموقع داخل مركز البيانات الخاص بنا
- 2 Microsoft وAcronis النسخ الاحتياطي المستند إلى السحابة من خلال شركاء عالميين مثل

التعافي من الكوارث

وهو نموذج خدمة الحوسبة السحابية الذي يسمح للعملاء بنسخ (DraaS) تقدم صحاري نت التعافي من الكوارث كخدمة بياناتهم والبنية التحتية لتكنولوجيا المعلومات احتياطيًا في مراكز البيانات الخاصة بنا وتوفير جميع عمليات تنظيم التعافي من ، لاستعادة الوصول ووظائف البنية التحتية لتكنولوجيا المعلومات بعد وقوع كارثة SaaS الكوارث من خلال

خدمات المدارة الحوسبة السحابية | Cloud Managed Services

Effective management remains a top priority for most organizations as cloud adoption continues to rise globally. To tackle this challenge, organizations opt for different approaches to managing their cloud infrastructure. Some manage it in-house, while others rely on a Cloud MSP (Managed Service Provider) to simplify immediate complexities. Additionally, some organizations choose a managed cloud service provider who can oversee broader missions with a clear vision for managing hybrid environments and resources.

Azure stack Managed Services

- Provide complete support of Azure Stack services (IaaS & PaaS).
- Communicate on-premises DC with azure stack environment.
- Provide environment for manage AKS.
- Webapp implementation.

Hosting Managed Services

- Software updates/patches.
- Monitoring services and server's performance.
- Automation Backup services.
- Restore files and databases with just one click.

M365 Managed Services

- Providing end-to-end management from business strategy to end-user support.
- Our Gold Partner status as a Microsoft Tier 1 Direct Cloud Solutions Provider (CSP) ensures you receive the highest levels of expertise.
- We have broad skills and expertise from a large number of skilled engineers and consultants throughout the Kingdom of Saudi Arabia.

Azure Managed Services

Sahara Net's Managed Services for Microsoft Azure provide design, delivery and daily operational support of compute, storage and virtual network infrastructure in Azure. We monitor and manage system software, infrastructure configurations and service consumption using proven processes and tools. In addition, our financial and governance services help reduce uncontrolled consumption.

خدمات مدارة

لا تزال الإدارة الفعالة تمثل الأولوية الرئيسية لمعظم المؤسسات ، حيث يستمر اعتماد السحابة بالارتفاع في العالم. لمواجهة هذا التحدي ، تختار المؤسسات طرقاً مختلفة لإدارة البنية التحتية السحابية الخاصة بهم. يقوم البعض بإدارته بأنفسهم ، والبعض الآخر يقوم بإحضار مزودي الخدمة المدارة عبر السحابة للتخفيف من تعقيداتهم الفورية ، بينما يختار البعض أن يكون لديهم مزود خدمة سحابية مُدار يمكنه التعامل مع مهمة أوسع برؤية واضحة لإدارة البيانات والموارد المختلفة.

المدارة Azure Stack خدمات

- Azure Stack (IaaS & PaaS) توفير الدعم الكامل لخدمات.
- Azure Stack تواصل مركز البيانات المحلي مع بيئة.
- Azure Kubernetes توفير البيئة لإدارة خدمة.
- "Webapp" تنفيذ تطبيق الويب.

خدمات الاستضافة المدارة

- تحديثات البرامج / التصحيحات.
- مراقبة الخدمات وأداء الخادم.
- خدمات النسخ الاحتياطي التلقائي.
- استعادة الملفات وقواعد البيانات بنقرة واحدة.

خدمات مايكروسوفت 365 المُدارة

- توفير إدارة شاملة من استراتيجية الأعمال إلى دعم المستخدم النهائي.
- حصولك على Microsoft Tier 1 (CSP) تضمن حالة الشريك الذهبي لدينا كموفر للحلول السحابية المباشرة من أعلى مستويات الخبرة.
- لدينا مهارات وخبرات واسعة من عدد كبير من المهندسين والاستشاريين المهرة في جميع أنحاء المملكة العربية السعودية.

المدارة Azure خدمات

تصميمًا شاملاً، وتسليمًا فعالاً، ودعمًا تشغيليًا يوميًا للحوسبة، Microsoft Azure توفر خدمات صحاري نت المدارة لـ تتولى صحاري نت مراقبة وإدارة برامج النظام، وتكوينات البنية Azure. والتخزين، والبنية التحتية للشبكة الافتراضية في التحتية، واستهلاك الخدمة باستخدام الأدوات والعمليات المناسبة. علاوة على ذلك، تساعد خدماتنا المالية والحوكمة في تقليل الاستهلاك غير المنضبط وتحقيق أفضل استفادة من مواردك السحابية.

حزمة الحماية من اكرونيس | Acronis Cyber Protect Cloud

Acronis Cyber Protect Cloud provides top-tier cyber security and privacy protection. This is done by addressing new and emerging cyber threats using an improved detection rate, smart protection plans, and deploying additional protection for forensics, backups, and recovery. With the app's global threat tracking and smart alerts, and forensic backups, user data are never compromised.

The benefits of Acronis Cyber Protect Cloud are numerous. The software integrates storage, backup, and data protection solutions for small and medium businesses. The security tool also features a forensic backup option. In addition, Acronis is designed for remote workers and features powerful and functional ransomware protection. On the other hand, Acronis only offers mobile apps for advanced tiers. Cloud storage is also not integrated but rather offered as a separate product.

Advanced Security

Enhance your security services with integrated cyber protection that includes full-stack anti-malware. Increase your detection rate and responsiveness to the latest cyberthreats. Extend cyber protection to web browsing, backed-up data, the recovery process, and exploit prevention. Enable investigations by capturing forensic data in backups.

Full stack anti-malware

URL filtering

Exploit prevention

Advanced Backup

Defend clients' data, even between scheduled backups. Extend backup capabilities to SAP HANA, Oracle DB, MariaDB, MySQL, and application clusters. You can also gain visibility into data-protection statuses across your clients' infrastructure.

Continuous data protection

Data protection map

Off-host data processing

Advanced Disaster Recovery

Get clients back to business in mere minutes when disaster strikes by spinning up their systems in the Acronis Cloud and restoring them anywhere, ensuring immediate data availability. Make

disaster recovery painless and increase efficiency with orchestration, runbooks, and automatic failover.

Disaster recovery orchestration

Production failover

Site-to-site VPN

Advanced Email Security

Block any email threat, including spam, phishing, business email compromise (BEC), advanced persistent threats (APTs), and zero-days in seconds before it reaches end-users. Leverage Perception Point's next-generation technology for lightning-fast detection and easy deployment, configuration, and management.

Anti-phishing and anti-spoofing engines

Anti-evasion technologies

Next-generation dynamic detection against zero-days

Advanced Data Loss Prevention (DLP)

Prevent leakage of sensitive data from client workloads via peripheral devices and network communications. Simplify DLP service provisioning and management by observing sensitive data transfers to automatically map DLP policies to clients' business specifics.

Data loss prevention

Automatic initial DLP policy creation

Automated, user-assisted extension of enforced DLP policies

Advanced File Sync and Share

Get a full control over data location, management and privacy with a file sync and share service, including a transaction ledger to enable notarization and eSignature capabilities, across all platforms.

File notarization

Embedded eSignatures

Independent file verification

Advanced Data Loss Prevention (DLP)

Streamline vulnerability management and promptly close gaps in your clients' IT infrastructure through patch management. Gain visibility into your clients' software assets and data protection to ease daily tracking and planning tasks, and improve clients' uptime by monitoring disk drives health.

Patch management

Fail-safe patching

Disk drive health monitor

حزمة الحماية من اكرونيس

أعلى مستوى من الأمن السيبراني وحماية الخصوصية. يتم ذلك عن طريق Acronis Cyber Protect Cloud يوفر معالجة التهديدات السيبرانية الجديدة والحديثة باستخدام معدل اكتشاف محسن وخطط حماية ذكية ونشر حماية إضافية للتحليل الجنائية و النسخ الاحتياطي والاسترداد. من خلال تتبع التهديدات العالمية والتنبيهات الذكية والنسخ الاحتياطي الجنائي للتطبيق ، لن يتم اختراق بيانات المستخدم مطلقاً .

عديدة. يدمج البرنامج حلول التخزين والنسخ الاحتياطي وحماية البيانات للشركات Acronis Cyber Protect Cloud فوائد Acronis الصغيرة والمتوسطة. تتميز أداة الأمان أيضاً بخيار النسخ الاحتياطي الجنائي. بالإضافة إلى ذلك ، تم تصميم سوى تطبيقات الأجهزة Acronis للعاملين عن بعد ويتميز بحماية قوية وعملية من البرامج الضارة. من ناحية أخرى ، لا يقدم المحمولة للمستويات المتقدمة. التخزين السحابي أيضاً ليس متكاملًا ولكنه يتم تقديمه كمنتج منفصل. مع العلم أن التطبيق ليس هو الأسهل في الاستخدام.

الأمن المتقدم

عزز أمانك من خلال حماية إلكترونية متكاملة تشمل مكافحة البرامج الضارة. قم بتحسين معدل اكتشافك واستجابتك لأحدث التهديدات الإلكترونية. وسّع الحماية لتشمل تصفح الويب، والبيانات الاحتياطية، وعملية الاسترداد، ومنع الاستغلال. كما يمكنك تمكين التحقيقات عبر النقاط بيانات الطب الجنائي من النسخ الاحتياطية.

الأمن السحابي | Cloud Security

SSL Certificates

Having an SSL certificate for your site reassures customers that they are sending their data to a legitimate organization and that their data will be encrypted while it is transmitted. In fact, site abandonment rates are as high as 90% for sites without SSL certificates. This can lead to lost revenue, unhappy customers, and a tarnished reputation.

(SSL طبقة مأخذ التوصيل الآمنة)

لموقعك يمنح عملاءك الثقة بأن بياناتهم تُرسل إلى جهة موثوقة وتُشفّر أثناء النقل. تشير SSL الحصول على شهادة ، مما قد يؤدي إلى فقدان SSL الإحصاءات إلى أن ما يصل إلى 90٪ من الزوار قد يغادرون المواقع التي لا تستخدم شهادة الإيرادات، واستياء العملاء، وتأثر سمعة العلامة التجارية.

Firewall as a Service

Sahara Net gives your business access to next-generation firewall solutions designed to protect your cloud environment in Sahara Net DC, along with around-the-clock support from certified

security experts. We'll help you configure and deploy your firewall policies according to your exact needs, and in accordance with the latest security best practices.

جدار الحماية كخدمة

تمنحك صحارى نت إمكانية الوصول إلى حلول جدار الحماية من الجيل التالي، المصممة خصيصاً لحماية بيئتك السحابية في مركز بيانات صحارى نت. ويصاحب ذلك دعم متواصل على مدار الساعة من قبل خبراء أمن معتمدين. نساعدك في تهيئة ونشر سياسات جدار الحماية بما يتوافق مع احتياجاتك الدقيقة وأحدث ممارسات الأمان.

Email Security

Email spam exposes your systems to malware and phishing attacks — and distracts your employees, costing both time and productivity.

Sahara Net Email applies industry best practices to block spam originating from known, untrusted sources. This includes email that is, with a high degree of certainty, not sent from legitimate services — such as messages from compromised servers or so-called “spam cannons” that flood the internet with unsolicited content.

Our techniques include using IP blocklists provided by reputable organizations across the email industry, as well as filtering emails with attachment types commonly used to exploit end-user systems.

أمن البريد الإلكتروني

يُعد البريد الإلكتروني العشوائي تهديداً حقيقياً لأنه يعرض أنظمتك للبرمجيات الضارة وهجمات التصيد، كما يُشكل مصدر إلهاء مكلفاً للموظفين.

يعتمد البريد الإلكتروني من صحارى نت على مجموعة من أفضل ممارسات الحماية المتبعة في الصناعة لمنع الرسائل العشوائية القادمة من مصادر مشبوهة. يشمل ذلك رسائل البريد الإلكتروني التي نحدد بدرجة عالية من اليقين أنها لا تصدر عن جهات موثوقة، بدءاً من الخوادم المخترقة وصولاً إلى خدمات البريد العشوائي التي ترسل رسائل غير مرغوب فيها عبر الإنترنت.

من جهات موثوقة معترف بها في قطاع البريد الإلكتروني، بالإضافة IP تشمل أساليب الحماية استخدام قوائم حظر عناوين إلى حظر الرسائل التي تحتوي على أنواع مرفقات معروفة باستغلالها لأجهزة المستخدم النهائي.

DMARC

What is DMARC?

DMARC (Domain-based Message Authentication, Reporting & Conformance) is an email authentication protocol designed to protect your domain from spoofing, phishing, and other email-based cyberattacks.

It builds on two existing technologies DKIM and SPF. By combining them, and adding policy enforcement and reporting, DMARC helps ensure only legitimate emails are sent from your domain.

01 DKIM (DomainKeys Identified Mail)

02 SPF (Sender Policy Framework)

What kind of threats does it protect against?

DMARC protects against exact-domain spoofing attacks, where attackers forge the “From:” email address to make it appear as if the message is coming from your organization.

Without DMARC, malicious actors can use your domain to steal sensitive information such as login credentials and personally identifiable information (PII).

What is DKIM?

DKIM (DomainKeys Identified Mail) adds a digital signature to each email, allowing recipients to verify that the email hasn't been tampered with and confirming the sender's identity.

What is SPF?

SPF (Sender Policy Framework) is an email authentication method that defines which mail servers are authorized to send emails on behalf of your domain.

How does DKIM work?

DKIM uses cryptographic key pairs

Public Key: Published in your domain's DNS and available to mail providers.

Private Key: Stored securely on your outgoing mail server.

How the process works

The private key signs are parts of the email (headers and body).

If the signature matches, the email is authenticated.

The recipient server retrieves the public key to verify the signature.

So, how does DMARC build on SPF and DKIM?

SPF and DKIM alone cannot verify the header From: address — the one user actually see. DMARC introduces a concept called “alignment”, which ensures that the domain used in SPF or DKIM matches the visible “From:” domain.

Additionally, DMARC provides reporting in the form of XML files that help you monitor email activity across the internet.

Not a fan of XML? Tools like PowerDMARC convert raw data into simple, visual dashboards to help you act quickly.

ما هو DMARC ؟

DMARC (مصادقة الرسائل المعتمدة على النطاق، التقارير والتوافق) هو بروتوكول لحماية البريد الإلكتروني يُستخدم للحد (التي تتم باستخدام نطاقك (Phishing) والتصيد الاحتيالي (Spoofing) من محاولات التزوير

إمكانية تطبيق السياسات وإصدار تقارير تحليلية توفر طبقة DMARC على تقنيتين أساسيتين، ويُضيف DMARC يعتمد إضافية من الحماية والشفافية.

لتحديد الخوادم المصرح لها بإرسال الرسائل من نطاقك SPF.

لتوقيع الرسائل رقميًا بما يضمن سلامة محتواها وأصالة مصدرها: DKIM.

DMARC ما التهديدات التي يحمي منها

، والتي تُستخدم (From:) حماية فعّالة ضد رسائل التزوير التي تنتحل عنوان البريد الظاهر من نطاقك DMARC يوفر (PII). لخداع المستلمين وسرقة معلومات حساسة مثل كلمات المرور والبيانات الشخصية

(PII). والتي تُستخدم لخداع المستلمين وسرقة معلومات حساسة مثل كلمات المرور والبيانات الشخصية

ما هو DKIM؟

DKIM (مفاتيح النطاق المحددة للبريد) يُضيف توقيعًا رقميًا إلى الرسائل الإلكترونية، مما يُتيح للجهة المستلمة التحقق من سلامة محتوى الرسالة وهوية المرسل

ما هو SPF؟

(إطار عمل سياسة المرسل) هو آلية للتحقق من أن الرسائل المُرسلة من نطاقك تصدر فقط عن خوادم مُصرح بها SPF.

كيف يعمل DKIM؟

:على نظام تشفير يتكوّن من DKIM تعتمد آلية

ويكون متاحًا لمزودي البريد (DNS) المفتاح العام: يُنشر في نظام أسماء النطاقات

المفتاح الخاص: يُخزّن على خادم البريد الصادر

خطوات العمل

يتم توقيع أجزاء محددة من الرسالة باستخدام المفتاح الخاص

عند استلام الرسالة، يتم التحقق من التوقيع باستخدام المفتاح العام.

في حال تطابق التوقيعين، تُعتبر الرسالة موثوقة.

مستوى الحماية؟ DMARC كيف يعزز

الظاهر مع النطاق المصرح به. هنا "From:" ، إلا أنهما لا يضمنان تطابق عنوان DKIM و SPF على الرغم من فعالية ، والتي تربط بين النطاق المستخدم في التحقق والنطاق الظاهر (Alignment) عبر خاصية المحاذاة DMARC يأتي دور للمستلم.

، تُمكنك من مراقبة حركة البريد وتحليلها لاكتشاف التهديدات مبكرًا XML إصدار تقارير دورية بصيغة DMARC كما يُتيح

تُحول هذه البيانات إلى تقارير مرئية وسهلة الفهم PowerDMARC مناسبة لك، فهناك أدوات مثل XML وإذا لم تكن صيغة

السحابة المرنة | Elastic Cloud

Sahara Net's Elastic Cloud delivers high-speed memory and the latest processors to power your cloud applications — ensuring fast performance with low latency.

You can launch your cloud environment in just minutes using our easy-to-use console. The intuitive interface allows you to scale resources up or down based on real-time demand, so you only pay for what you use — without the overhead of costly infrastructure or large IT teams.

Sahara Net's Elastic Cloud also offers industry-leading SLAs, with a 99.9% uptime guarantee for individual instances and 99.99% uptime across multiple zones in the same region.

Elastic Cloud Deployment Worldwide Design the solution you want and deploy by one click
Global Availability Your business is important to us! We are connected to many uplinks so that you can get reached from anywhere.

Infinite OS combinations Deploy Centos, Debian, Ubuntu, Windows, and more!) or use Docker images.

No long term contracts It's so easy! You'll never have to worry about a monthly bill again. Pay only for what you use, and scale up or down on demand.

Backups It's important for all systems to have backups that are automatic and run daily. With Sahara Cloud, you can rest assured that your system is always backed up!

Save hours managing your compute environment Our tools make it simple to collaborate, secure, monitor, and backup your Elastic VPS.

Cloud Firewalls Firewall feature provides a possibility to control your Elastic VPS availability both from inside and outside of the Platform.

Team Management Enable unified collaboration to manage and scale your infrastructure and

apps, with **one** invoice, and no shared credentials.

Monitoring Out-of-the-box monitoring of RAM, CPU, network, storage, IO with alert notifications, as well as load tracking on infrastructure level.

Load Balancers Deploy with one click. Load Balancers distribute incoming traffic across your infrastructure to increase your application's availability.

Elastic Storage With a fault-tolerant software-defined storage, you can have an elastic block, file and object storage at your fingertips.

Live Migration The initial location of a project can be easily changed using the migration option.

Horizontal Scaling Elastic Cloud is an excellent solution for those who need horizontal scaling (adding several servers to the cluster) for their needs of high availability (HA) and performance.

Private Networking With our new Elastic Cloud, your VPS can now talk to each other without using up any of your bandwidth!

السحابة المرنة

أداءً عاليًا لتطبيقاتك السحابية، من خلال الاعتماد على ذاكرة فائقة السرعة وأحدث Sahara Elastic Cloud توفر سحابة المعالجات، مما يضمن نتائج أسرع وزمن استجابة منخفض.

بفضل واجهتنا البديهية، يمكنك تلبية احتياجاتك السحابية وتشغيلها خلال دقائق قليلة فقط، وبنقرات بسيطة من وحدة التحكم. كما تتيح لك المنصة توسيع أو تقليص السعة بسهولة حسب متطلباتك الفعلية، لتدفع فقط مقابل ما تستخدمه – دون الحاجة لاستثمارات مكلفة في البنية التحتية أو توظيف فرق تقنية كبيرة.

رائدة في السوق، مع ضمان وقت تشغيل بنسبة 99.9% (SLA) اتفاقية مستوى خدمة Sahara Elastic Cloud توفر للحالات الفردية، و99.99% للمناطق المتعددة ضمن نفس المنطقة.

في جميع أنحاء العالم Elastic Cloud نشر "السحابة المرنة"

صمم الحل الذي تريده وانشره بنقرة واحدة

عملك مهم بالنسبة لنا! نحن متصلون بالعديد من الارتباطات الصاعدة بحيث يمكن الوصول إليك من أي مكان التوافر العالمي والمزيد! أو استخدم صور Windows و Ubuntu و Debian و Centos انشر مجموعة أنظمة تشغيل لا حصر لها Docker.

سهل للغاية! لن تقلق أبدًا بشأن الفاتورة الشهرية مرة أخرى. ادفع فقط مقابل ما تستخدمه، وقم بزيادة أو لا عقود طويلة الأجل. خفض الطلب حسب الاحتياج.

Sahara Cloud – من الضروري أن تتمتع جميع الأنظمة بنسخ احتياطية تُجرى تلقائيًا بشكل يومي. مع النسخ الاحتياطية السحابة من صحاري نت – يمكنك الاطمئنان إلى أن بياناتك تُحفظ بأمان ويتم نسخها احتياطيًا باستمرار، دون أي تدخل يدوي.

مزايا

لماذا تختار أداة إنشاء المواقع الخاصة من صحارى نت؟

قم بإسقاط الصور والنصوص ومقاطع الفيديو وسحبها بسهولة إلى المكان الذي تريده داخل موقعك الإلكتروني سهلة للغاية.

وفر لمستخدميك تجربة دفع مرنة من خلال مجموعة مكوناتنا الإضافية للتجارة الإلكترونية، والتي تدعم خيارات الدفع. خيارات دفع متعددة.

انقل موقعك الحالي من أي مكان إلى منشئ مواقع صحارى نت بكل سهولة استيراد المواقع.

يمكنك وضع الصور والنصوص ومقاطع الفيديو في المكان الذي تريده بالضبط في جميع أنحاء واجهة السحب والإفلات موقعك.

قدم أفضل تجربة للمستخدمين من خلال موقعك الذي يتوافق مع جميع الأجهزة متوافق مع جميع الأجهزة.

اختر من بين أكثر من 50 لغة مدعومة في نظامنا متعدد اللغات.

روابط صحارى نت المختصرة | Slinks – Sahara Shortlinks Service

Create shortlinks in seconds and measure every click. Sahara ShortLinks gives you branded domains, real-time analytics, QR codes, password protection, and time/visit limits.

Why Choose Sahara ShortLinks

Create short URLs in seconds

Define your own custom short codes

Secure links with HTTPS enforcement

Password Protection for your links

Time-Based Availability

Real-time click tracking and analytics

Built-in QR Code generation

Multilingual interface (Arabic & English)

Ability to set a maximum number of allowed visits for your link

Dashboard for managing all your links

What are shortlinks and why use them?

Shortlinks are shortened URLs that redirect to the original page. They're easier to share, brand, and track across channels.

What websites or apps can I shorten links for?

Any safe URL works. Use SLinks to shorten your [Instagram](#), [Facebook](#), [YouTube](#), [X \(Twitter\)](#), [LinkedIn](#), [WhatsApp](#), [TikTok](#), blogs, and more.

Are shortlinks secure with Sahara?

Yes. Sahara ShortLinks enforce HTTPS by default and is locally hosted in Saudi Arabia. Our practices align with Saudi regulatory requirements to help organizations meet compliance needs.

Do links expire or have visit limits?

You can set start/end times and a maximum number of allowed visits per link.

Do you support QR codes and analytics?

Yes. Generate QR codes instantly and view real-time analytics.

إمكانية تحديد الحد الأقصى لعدد الزيارات المسموح بها لروابطك

أنشئ روابط قصيرة في ثوانٍ

ما هي الروابط المختصرة ولماذا نستخدمها؟

قصيرة تُعيد التوجيه إلى الصفحة الأصلية. أسهل للمشاركة، وإبراز الهوية (العلامة URL الروابط المختصرة هي عناوين التجارية)، وتتبع الأداء عبر القنوات.

ما هي المواقع أو التطبيقات التي يمكنني اختصار الروابط لها؟

، والمدونات وغيرها [Instagram](#)، [Facebook](#)، [YouTube](#)، [X](#)، [Twitter](#)، [LinkedIn](#)، [WhatsApp](#)، [TikTok](#)، [SLinks](#) على أي رابط امن يعمل. استخدم

هل الروابط المختصرة آمنة مع صحاري نت؟

افتراضياً، وهو مستضاف محلياً داخل المملكة العربية السعودية HTTPS بروتوكول Sahara ShortLinks نعم. يفرض تتوافق ممارساتنا مع المتطلبات التنظيمية السعودية لمساعدة الجهات على تلبية متطلبات الامتثال.

هل تنتهي صلاحية الروابط أو لها حد للزيارات؟

يمكنك ضبط وقت البدء والانتهاء، وتحديد الحد الأقصى لعدد الزيارات لكل رابط.

والتحليلات؟ QR هل الخدمة تدعم رموز

فوراً، ومتابعة التحليلات فوراً QR نعم. يمكنك إنشاء رموز

الربط والاتصال | Connectivity

Why Choose Our Connectivity Services?

Proven Expertise

With over 30 years of experience, Sahara Net has been a pioneer in Saudi Arabia's IT and connectivity landscape

Carrier-Neutral Advantage

We partner with all major telecom providers in the Kingdom (STC, Mobily, ITC, Zain, GO), giving you unmatched flexibility and customized solutions.

Unmatched Reliability

Our redundant infrastructure and multiple international gateways (IGW) ensure maximum uptime and operational continuity.

24/7 Dedicated Support

Our expert technical team is available around the clock, backed by personalized account management to support your business every step of the way.

خبرة مثبتة

أكثر من 30 عامًا من الريادة في مجال تقنية المعلومات والاتصالات في المملكة العربية السعودية

حيادية الناقل

، مما يتيح لك (GO، زين، ITC، موبيلي، STC) شركات استراتيجية مع جميع مزودي الاتصالات الرئيسيين في المملكة حلول ربط مرنة ومخصصة حسب احتياجاتك.

موثوقية لا مثيل لها

لضمان استمرارية التشغيل واستقرار الخدمة (IGW) بنية تحتية احتياطية وبوابات دولية متعددة.

دعم فني على مدار الساعة

فريق دعم متخصص متاح 24/7، مع إدارة حسابات شخصية لضمان استجابة سريعة وفعالة لكل احتياجاتك.

الخدمات المدارة | Managed Services

In today's fast-paced digital world, you need a technology partner that keeps you ahead. Our managed services are designed to give you peace of mind—with a secure, stable, and efficient network running in the background while you stay focused on your business goals.

01- proactive management

We provide fully integrated managed services to enhance your network's performance and security through proactive management by our expert team.

02- 24/7 continuous monitoring

Our services include 24/7 continuous monitoring to detect and resolve issues before they impact your business.

03- Network optimization

Network performance optimization to achieve the highest levels of efficiency.

04- router management

Comprehensive router management, including configuration, upgrades, and troubleshooting.

05- Advanced security

Advanced security protection to defend against cyber threats.

06- Professional Service

Professional management of configuration, updates, and change processes.

07- Highly Maintained

Regular maintenance to ensure efficiency and stability.

مزايا

الخدمات المدارة

في عالم الأعمال سريع التغير، تحتاج إلى شريك تقني يُيقّيك دائماً في المقدمة. خدماتنا المُدارة صُممت لتمنحك راحة البال، مع شبكة آمنة، مستقرة، وفعالة تعمل في الخلفية بينما تركز أنت على تحقيق أهدافك. نقدم خدمات مُدارة متكاملة تهدف إلى تعزيز أداء شبكتك وحمايتها، وذلك من خلال إدارة استباقية يقوم بها فريق من الخبراء. تشمل خدماتنا:

إدارة استباقية 01

نقدم خدمات مُدارة متكاملة تهدف إلى تعزيز أداء شبكتك وحمايتها، وذلك من خلال إدارة استباقية يقوم بها فريق من الخبراء

مراقبة مستمرة 027/24

مراقبة مستمرة على مدار الساعة (7/24) لاكتشاف المشكلات ومعالجتها قبل أن تؤثر على عملك

تحسين أداء الشبكة 03

تحسين أداء الشبكة لتحقيق أعلى مستويات الكفاءة

إدارة أجهزة التوجيه 04

إدارة شاملة لأجهزة التوجيه تشمل التكوين، التحديثات، واستكشاف الأخطاء

حماية أمنية متقدمة 05

حماية أمنية متقدمة للتصدي للتهديدات السيبرانية

إدارة احترافية 06

إدارة احترافية لعمليات التكوين والتحديث والتغيير

صيانة دورية 07

صيانة دورية لضمان الكفاءة والاستقرار

الاتصال بالإنترنت | Internet Connectivity

Connectivity Services by Sahara Net

Internet Access

High-Speed Internet (FTTH, Microwave, VSAT, LTE 4G/5G)

Flexible and stable access options tailored to your bandwidth and location needs.

Dedicated Internet Access (DIA)

Reliable, non-shared connection with a static public IP address — ideal for businesses requiring consistent performance.

Secured Internet Access (with Sahara Shield Anti-DDoS)

Internet access with advanced protection against Distributed Denial of Service (DDoS) attacks and built-in firewalls for enhanced cybersecurity.

Access Over LTE

Cost-effective, high-speed access via 4G/5G networks — suitable for various business use cases.

Static IPv4 Address

A permanent and unchanging IP address, ideal for hosting services or secure remote access.

الاتصال بالإنترنت

خدمات وحلول الربط والاتصال من صحاري نت

الاتصال بالإنترنت

FTTH, Microwave, VSAT, LTE 4G/5G (إنترنت عالي السرعة)

خيارات مرنة ومستقرة للوصول إلى الإنترنت، مصممة خصيصًا لتلبية متطلباتك من حيث النطاق الترددي والموقع الجغرافي.

DIA (اتصال إنترنت مخصص)

عام ثابت، مثالي للشركات التي تتطلب اتصالاً عالي الأداء وموثوقية دائمة IP إنترنت غير مشترك مع عنوان

DDoS Protection (إنترنت آمن مع درع مدى لمكافحة هجمات)

مع جدران حماية مدمجة (DDoS) وصول محمي إلى الإنترنت مع دفاع متقدم ضد هجمات الحرمان من الخدمة الموزعة. لتعزيز الأمن السيبراني.

LTE (4G/5G) الوصول عبر شبكات

اتصال عالي السرعة وبتكلفة اقتصادية عبر شبكات الجيل الرابع والخامس، مناسب لمختلف الاستخدامات والقطاعات

ثابت IPv4 عنوان

اتصال عالي السرعة وبتكلفة اقتصادية عبر شبكات الجيل الرابع والخامس، مناسب لمختلف الاستخدامات والقطاعات

Connectivity Private Data Networks | شبكات البيانات الخاصة

Private Data Networks

Data Connectivity (MPLS & VPN)

Create secure and private virtual networks to connect geographically distributed offices while maintaining confidentiality and performance.

Global MPLS Network

Expand your private and secure network to international locations with guaranteed bandwidth and performance.

SD-WAN

Enhance network performance and reduce operational costs by intelligently managing traffic across multiple internet connections — perfect for multi-site deployments.

VSAT Connectivity

Reliable satellite internet and data services for remote or underserved areas, offering flexible deployment options (fixed or mobile, shared or dedicated).

خدمات وحلول الربط والاتصال من صحارى نت

شبكات البيانات الخاصة

MPLS و VPN اتصال بيانات عبر

بناء شبكات افتراضية خاصة وأمنة لربط مواقع العمل الجغرافية المتعددة، مع الحفاظ على خصوصية البيانات وسرعة الأداء.

عالمية MPLS شبكة

توسّع آمن وموثوق لاتصال الشبكة ليشمل الفروع والمواقع العالمية، مع الحفاظ على جودة الاتصال وسرعة نقل البيانات.

SD-WAN

تقنية ذكية لإدارة حركة مرور البيانات عبر عدة روابط إنترنت، لتحسين الأداء وتقليل التكاليف، مثالية للمنشآت ذات الفروع المتعددة.

عبر الأقمار الصناعية VSAT اتصال

خدمة إنترنت وبيانات موثوقة للمناطق النائية أو التي تفتقر للبنية التحتية، مع خيارات مرنة للنشر (ثابت أو متحرك، مشترك أو مخصص).

الأجهزة والبنية التحتية لتقنية المعلومات | Hardware & IT Infrastructure

Secure Data Center & Server Room Solutions

Design, build, and maintain secure and efficient IT environments with advanced cooling systems, power redundancy, and robust physical security measures.

High-Performance Network Design & Implementation

Expert planning and deployment of resilient network infrastructure, including structured cabling and a wide range of equipment (switches, routers, Wi-Fi access points) to ensure seamless data flow.

Expert Network Hardware Solutions

Professional selection, installation, configuration, and seamless integration of top-tier WAN and LAN devices from industry leaders like Cisco, HPE Aruba, and Fortinet.

Unified Communication Systems

Deployment and maintenance of fully integrated voice and video communication solutions, including IP & Hybrid PABX systems and advanced video conferencing platforms to boost collaboration.

AI-Powered Video Surveillance (AVS)

Smart video monitoring solutions with features such as intelligent video search, facial recognition, and AI-driven intrusion detection.

Scalable Access Control Systems

Accurate and secure employee attendance tracking via fingerprint or facial recognition, with seamless integration into payroll and HR platforms.

Biometric Time & Attendance Management Systems

Accurate and secure employee attendance tracking via fingerprint or facial recognition, with seamless integration into payroll and HR platforms.

الأجهزة والبنية التحتية لتقنية المعلومات

حلول مراكز البيانات وغرف الخوادم الآمنة

تصميم، بناء، وصيانة بنية تحتية لمعلومات آمنة وفعالة، تشمل أنظمة تبريد متقدمة، مصادر طاقة احتياطية، وإجراءات أمنية مادية متكاملة.

تصميم وتنفيذ شبكات عالية الأداء

نشر بنية تحتية قوية تشمل الكابلات الهيكلية، المفاتيح الذكية، الموجهات، ونقاط الاتصال اللاسلكية لتدفق بيانات سلس وموثوق.

حلول أجهزة الشبكات الخبيرة

Cisco عالية الجودة من كبار المصنعين مثل (WAN/LAN) اختيار احترافي، تركيب، وتكامل سلس لأجهزة الشبكات وFortinet وHPE Aruba.

أنظمة الاتصالات الموحدة

، ومنصات مؤتمرات فيديو حديثة لتعزيز كفاءة (IP وHybrid PABX) تنفيذ وصيانة أنظمة اتصال صوتي ومرئي متكاملة. التعاون بين الفرق.

(AVS) أنظمة المراقبة بالفيديو المدعومة بالذكاء الاصطناعي

حلول مراقبة متقدمة تشمل البحث الذكي عن الفيديو، التعرف على الوجوه، واكتشاف التسلل باستخدام تقنيات الذكاء الاصطناعي.

أنظمة التحكم في الوصول القابلة للتوسعة

أنظمة أمنية قابلة للإدارة للتحكم في الوصول المادي إلى المنشآت، مع دعم المراقبة المركزية وإمكانات التكامل مع الأنظمة الأخرى.

أنظمة الحضور والانصراف البيومترية

تتبع حضور الموظفين باستخدام البصمة أو التعرف على الوجه، مع تكامل مباشر مع أنظمة الموارد البشرية والرواتب.

استمرارية الأعمال | Connectivity Business Continuity

Backup Link

A secondary (active or standby) connection to ensure uninterrupted operations in the event of a primary link failure.

Backup Link(رابط احتياطي)

اتصال ثانوي (فعال أو احتياطي) يضمن استمرارية أعمالك دون انقطاع في حال حدوث أي خلل في الرابط الأساسي.

Knowledgebase

Billing

Where can I find my invoice history?

You can view your invoice history from within our members area:

1. Login at <https://shop.sahara.com/clientarea.php>
2. Click the Billing menu
3. Click My Invoices

Your invoice history is displayed on this page. If you have a lot of invoices they will be split across several pages, use the Previous, Next buttons on the bottom-right corner to move through the pages of invoices.

The "Status" links in the left-hand sidebar can also be used to help organise your invoices by type, for example to see all the Unpaid invoices.

Finally, you can click the column headings in the main table to sort the invoices in descending order, click the column heading again to sort in ascending order.

General Hosting

Do I need to register all three domain name extensions: .com, .sa, .net and .org?

You will realize that the expense for domain name registration and support is minor compared to the marketing expense to promote and establish your domain name in the marketplace. The last thing you want to happen is to have someone else (your competitor in most cases) benefit from your efforts in establishing your name. You will see competitors registering names close to yours, trying to benefit from typo mistakes your visitors may make. For example, someone tried registering yahho.com in order to piggyback on the popular yahoo.com. We strongly recommend that you register all 3 domain extensions for your business, service or products.

Edit DNS Records

Kindly follow the below steps to modify your DNS records:

1. Login to your profile in cloud <https://shop.sahara.com/clientarea.php>
2. Click on “Domain” , then click on “Manage DNS”
3. In the Manage DNS option, click on the Edit zone option
4. Click on the “Add record “ button
5. A screen will pop up, add the desired records values and then click on the green “Add record” button.

Kindly note any change in the DNS records might take around 24 hours to propagate globally.

How long will it take to register my domain name?

We will process your domain registration order within 24 hours, provided the registration form is filled out correctly. Once your domain name has been registered successfully, it will be added to your domain panel account. However, the activation of your domain name will take up to 72 hours. This is to allow your domain's information to be propagated in all the DNS servers globally.

How to authenticate contact us form?

Contact us form are widely available in website to help customers/clients contact the website owners with any request or concern.

To send an email using a contact us form, the email must be authenticated with a username and password. PHP mailer function must be used instead of PHP mail()

How to configure FTP client?

To use FTP account, kindly download an FTP client such as filezilla and implement the below configuration;

Host: Domain name.

Username and Password: (enter the provided username and password)

Connection type: SSL explicit encryption.

I just registered my domain but where do I get the password to access it?

We will process your order within 24 hours and add the domain name to your domain panel account when it is registered successfully. Once your domain has been added, you may access it from your user account at any time. Please contact us only if you do not see your new domain name in your user account after more than 48 hours.

Install SSL on plesk control panel

Kindly install the SSL certificate in your control panel by following the below steps:

Step 1: Login to your Plesk

Step 2: Locate Websites & Domains > example.com and click “SSL/TLS certificates”

Step 3: Now, you can view certificate list for SSL certificate installation, where choose your SSL/TLS certificate name “SSL_name” for your qne.com.sa website.

Step 4: Now you can see the screen “Change Properties of SSL/TLS Certificate” with your certificate name. There are two file options namely, Certificate (*.crt) and CA Certificate (*.ca.crt), where you can upload your Certificate (.crt) and CA certificate (.ca-bundle) files, which are issued by a certificate authority. **OR**, Copy and paste the SSL Certificate (*.crt) and CA certificate (.ca-bundle) code as text format.

Questions

Which version of .Net Framework they are supporting?

We supported .Net Framework for versions 1, 2, 3.5 and 4 .

SHARED HOSTING

Now that you have decided to host your web site, you might be wondering what the differences are between each type of service. If you are a beginner and just starting out to build a web site, you would require shared hosting, rather than dedicated.

What is the difference between Linux and Windows shared hosting services?

There are two platforms which your web site may be hosted on. The platform that you choose does not depend on what operating system you are using to create the web site. Instead, it depends on what advanced technology your web site uses. If your web site is static and composed of HTML and graphics, then most likely, your web site may be hosted on a Linux server.

Linux

Lower hosting costs than Windows, most of the time

Supports PHP scripting, MySQL database, Frontpage extensions, Real Audio/Video streams

Linux based platform

Windows

Supports IIS, VBScript, Windows Media, ASP scripting, MSSQL database, .NET framework

Windows based platform

Few web hosting PHP option but most don't

How do I know which package I need?

After you decide which platform your web site will be hosted in, you need to determine what specifications are required for your web site. In other words, if you were buying a car, you have just determined that you wanted a stick shift, rather than an automatic. Now it's time to work out the specs you require - do you need a 2, 5, or 7 seater? Here are the things you need to ask yourself:

What is your website for?

Is your website a graphical catalogue, where you will have many pictures of many items? Or will your website be content intensive, where it is mostly text-based? This influences the amount of disk space you need.

How many pages do you need for your web site?

Though each web page can be short or long in length, the number of pages you plan to have on your site can help determine how much disk space you need.

How many email accounts can I create?

All our hosting plans come with unlimited email accounts. You can create unlimited number of email accounts.

How much traffic [bandwidth] will I get?

This depends on two things - the size of the files that are requested and transferred from your website, and the number of visitors coming to your site. If your web site is new, then the amount of traffic is likely to be low and traffic would be a lower concern for you. On the other hand, if you expect to be drawing a high number of visitors because you have advertised the site, then you may want to select a package with a higher limit for bandwidth.

After answering these questions, you can contact Sales department for the web hosting providers. Reputable hosting providers should have a toll free number, where their sales reps will listen to your needs and recommend a package for you. To summarize, they will usually help you make a decision on the basis of the following three criteria.

Disk space

Bandwidth

What contract term should I sign up for?

Many hosts offer discounts if you pre-pay for a longer term up front when you sign up. The web hosting industry has reached a point margins are extremely low, so it is difficult to foresee hosting providers further lowering prices. Signing up for a longer term also saves time from needing to extend contracts. Therefore, if you found a reputable host, we would recommend you sign onto a longer term.

What is my pop3 and smtp server?

Now that you have decided to host your web site, you might be wondering what the differences are between each type of service. If you are a beginner and just starting out to build a web site, you would require shared hosting, rather than dedicated.

Internet Services

How can I get Internet service from the Sahara Net ?

How to have internet service from Sahara Net?

There are several ways to have internet service from [Sahara Net](http://www.sahara.com).

For Corporate Internet service.

Call Our Sales at **800-304-304-3**.

Send email to support@sahara.com or sales@sahara.com

Visit us through [sahara.com](http://www.sahara.com) .choose corporate solutions and fill the request form from [information request](#).

For Personal/Home Internet Service.
Call us through landline or cell phone at **800-304-304-3**.
Visit [Sahara Net](http://www.sahara.com) website choose Personal Services and click on [Sahara Sadad](#).
Buy [Sahara Net](#) cards from any retail shops.

DNS - Nameservers

Managing DNS in the Client Area

Login to your Client Area account (<https://shop.sahara.com/>)

In the blue menu bar above **Welcome Back, YOUR NAME**, click on **Domains** and then click on **Manage DNS** from the drop-down menu

You should now be taken to the Manage DNS page.

To manage & edit DNS records for your domain name, click on the **pencil icon** on the far right-hand side of the domain you want to make the changes for.

If there isn't a pencil icon, it means a DNS zone hasn't been created for this domain in the Client Area. To create a DNS zone, click the Add DNS Zone button and make the name of the zone the domain name (i.e. if the domain name is test.com, the DNS zone name should also be test.com)

To add a DNS record, click the blue **Add Record** button.

A pop-up box will appear with fields you need to fill out.

NOTE - Certain record types will have additional fields to fill out, and those will appear when you select the type you want to add.

Once you have selected the record type and added the details for the DNS record, click on the green **Confirm** button.

To edit a DNS record, click on the pencil icon on the right-hand side of the record you want to make changes to.

Once you have selected the record type and added the details for the DNS record, click on the green **Confirm** button.

To delete a DNS record, click on the rubbish bin icon on the right-hand side of the DNS record you want to remove.

NOTE - You can only manage the DNS records for your domain name if the nameservers for your domain name has been set to point to us.

If you need further assistance, please open a support ticket so our staff can assist you!

Mail Settings

Delay in Mail Delivery

The Mail server will attempt to deliver all emails immediately. However, there may be instances where delivery is delayed due to various reasons. One example is when the remote receiving email server is not available.

The following depicts how the Mail server will behave for delayed emails:

1. The mail delivery will be retried every **15** mins.
2. You will get a notification regarding the delay after the mail has not been delivered for the first **6** hours as well as every subsequent **6** hours. Note that this is only for notification and there is no action required from you as the user.
3. If the delivery is still unsuccessful after **24** hours, the delivery will be deemed as failed and the mail will be returned to the user.

E-Mail Configuration

Step-by-step instructions for configuring your E-Mail account in Outlook.

If you have set up an E-Mail address in the Control Panel, you can configure this account in your Outlook.

Link: <https://shop.sahara.com/index.php/knowledgebase/84/E-Mail-Configuration.html>

E-mail configuration for Outlook Office 365

Outlook Office 365

E-mail account management

1. Start Outlook.
2. Click on “File“ at the top left and then “Add Account“
3. → This will start the e-mail account setup wizard.

Automatic configuration

1. Enter your complete e-mail-address and click on “Connect”.
→ Outlook searches for the correct connection settings.
2. In the “Password” field, enter the password of your e-mail address that you defined when you created the e-mail-address in Control Panel.
3. Click on “Connect” again.
→ If you see the following message, your account has been successfully set up:
1. 4. Click on “Done” to complete the account setup.

→ The e-mail account has been set up. You can now use Outlook to send and receive e-mails with this e-mail address.

Note: If the automatic setup fails and you get a certificate error warning, then you can accept the certificate and your e-mail address will work. The warning appears because our SSL certificates for our e-mail-servers are not specific to your own domain.

Manual configuration

If the automatic configuration fails, you can also set up the e-mail account manually.

To do so, proceed as follows:

1. Enter your complete e-mail address.
2. Click on "Advanced options" and activate the "Let me set up my account manually" option.
3. Click on "Connect".

Select account type

1. Now select either an **IMAP** or **POP3** account:
 - **IMAP:** by choosing IMAP, your e-mails are stored on the server. Each time you read an e-mail, a copy is downloaded from the server.
 - **POP3:** by choosing POP3, your e-mails are downloaded to and saved on your device. The messages are then deleted from the server. This allows you to read your e-mails at any time, even if you are not connected to the internet.

If you are unsure, select "IMAP".

2. In the "Password" field, enter the password of your e-mail address that you defined when you created the e-mail address in Control Panel, and click on "Connect".
3. Click on "Done" to complete the account setup.

→ The e-mail account has been set up. You can now use Outlook to send and receive e-mails with this e-mail address.

Exceptional case

If you have made a mistake when entering the username (e-mail address) or password, an error message will appear.

In this case, proceed as follows:

4. Click on "Change Account Settings".
5. Select either "STARTTLS" or "SSL/TLS" as the encryption method for both servers.
6. Verify the port numbers according to the following list:

Account and connection type

IMAP with connection type "SSL"

IMAP with connection type "TLS"

POP with connection type "SSL"

POP with connection type "TLS"

SMTP with connection type "SSL"

-
6. SMTP with connection type "TLS" Click on "Done" to complete the account setup.

→ The e-mail account has been set up. You can now use Outlook to send and receive e-mails with this e-mail a

6. Click on "Next".
→ The account settings will be checked. If the account setup was successful, you will see the following message:

7. Click on "Done" to complete the account setup.

→ The e-mail account has been set up. You can now use Outlook to send and receive e-mails with this e-mail address.

How add a name to the Blocked Senders List?

How add a name to the Blocked Senders List?

add a name to the Blocked Senders List?

1. On the **Tools** menu, click **Options**.
2. On the **Preferences** tab, under **E-mail**, click **Junk E-mail**.
3. Click the **Blocked Senders** tab.
4. Click **Add**.
5. In the ***Enter an e-mail address or Internet domain name to be added to the list*** box, enter the name or address you want to be added, and then click **OK**.
6. Repeat steps 4 and 5 for each name or address that you want to add.

NOTES

- You can quickly add a name to the **Blocked Senders List** by right-clicking the junk e-mail message, and then, on the shortcut menu, pointing to **Junk E-mail** and clicking **Add Sender to Blocked Senders List** on the shortcut menu.
- If you have existing lists of names and addresses that you want to block, you can import the information into Microsoft Office Outlook 2003 by saving the list as a text (.txt) file with one entry per line, and then importing the list.
- If you are using a Microsoft Exchange Server e-mail account and working online, you must be using Microsoft Exchange Server 2003 or later. If you do not know what version of Exchange server your e-mail account is using, contact your Exchange administrator.
- To remove a name from the **Blocked Senders List**, in the **Blocked Senders** tab, click the name you want to remove from the list, and then click **Remove**.

How can send Out of Office notices with POP3, IMAP, and Hotmail accounts?

You can set up Microsoft Office Outlook 2007 to send an automatic response to some or all of the people who send you e-mail messages. If you use a Microsoft Exchange Server 2007 account, you should use the Out of Office Assistant.

Step 1: Create a message template

TIP Download a [formal](#) or [informal](#) out of office message template from [Microsoft Office Online](#).

On the **File** menu, point to **New**, and then click **Mail Message**.

On the **Options** tab, in the **Format** group, click **Plain Text**.

In the message body, type the message that you want to send as your automated reply.

In the message window, click the **Microsoft Office Button** and then click **Save As**.

In the **Save As** dialog box, in the **Save as type** list, click **Outlook Template (*.oft)**.

In the **File name** box, type a name for your message template, and then click **Save**.

Step 2: Create a rule to automatically reply to new e-mail messages

Do the following:

On the **Tools** menu, click **Rules and Alerts**.

In the **Rules and Alerts** dialog box, click **New Rule**.

Under **Start from a blank rule**, click **Check messages when they arrive**, and then click **Next**.

Under **Which condition(s) do you want to check?**, select the **sent only to me** check box and any other criteria that you want, and then click **Next**.

When you see a dialog box informing you that this rule will be applied to every message that you receive, click **Yes**.

Under **What do you want to do with the message?**, select the **reply using a specific template** check box.

Under **Step 2: Edit the rule description (click an underlined value)**, click a **specific template**.

In the **Select a Reply Template** dialog box, in the **Look In** box, click **User Templates in File System**.

Select the template that you created in the previous section, and then click **Open**.

Click **Next**.

Optionally, select the check boxes for any exceptions to the auto-reply rule.

Click **Next**.

Under **Step 1: Specify a name for this rule**, type a name for the auto-reply rule, and then click **Finish**.

TIP Consider creating an Outlook task or to-do reminder to help you remember to turn off this rule when you want to stop sending automatic replies.

The **reply using a specific template** rule in the Rules Wizard sends your automated reply only once to each sender during a single session. This rule prevents Outlook from sending repetitive replies to a single sender from whom you receive multiple messages. During a session, Outlook keeps track of the list of users to whom it has responded. If you exit Outlook and then restart it, however, the list of the senders who have received automated replies is reset.

IMPORTANT For the Rules Wizard to send a reply automatically, Outlook must be running and configured to check periodically for new messages.

Turn off automatic replies

To turn off the rule you created in step 2 above, do the following:

On the **Tools** menu, click **Rules and Alerts**.

On the **E-mail Rules** tab, under **Name**, clear the check box for the rule you want to turn off.

How do I clean up my mail if I have reached my quota?

Go to webmail and Login with your Email ID and password. delete any old messages and click on "**Empty Trash**". Do the same for you Inbox as well as your other folders. You can also delete entire folders if you do not need any of the emails inside them. Go to the "Folders" tab, click on the folder and then choose action "Empty" (to remove all emails in the folder, but leave the folder) or "Delete" (to remove both the mails and the folder).

How do I configure email on my Mac using Apple Mail?

To begin with, click on the Apple Icon Menu on the top left of your screen and select the **System Preferences...** submenu.

You will be taken to your System Preferences screen where you can adjust various options of your Mac OS. Select the **Internet Accounts** link to proceed.

Here, you will see a list of all the different accounts you have registered including iCloud, FaceBook, Vimeo, etc. Scroll down and select the **Add Other Account...** option.

Next, select to add a **Mail account** on the next screen.

A pop-up will appear asking you to fill in your name and the Email address that you want to register with Mac Mail. Note, that people you send emails to will receive them from the name you enter here. This option, however, can be changed later on. Finally, click **Sign in** to proceed.

Now, you have to fill in the server settings for your Email account:

- **Email Address:** – should be pre-filled with the value you've entered in the previous screen;
- **Username:** – enter your full email address as a username, i.e *username@yourdomain.com*. It will be used both for the incoming and outgoing connection;
- **Password:** – enter the password for your email account;
- **Account Type:** – it's set to IMAP by default. Unless you specifically want to use POP3 you should leave it that way;
- **Incoming Mail Server:** – check the exact settings to use with each of your mail accounts with your Mac Mail in your **Site Tools > Email > Accounts**, choose the preferred email account and go to **kebab menu > Mail Configuration** and select **Manual Settings** tab;
- **Outgoing Mail Server:** – same as the incoming server;

Once you fill in all the details, press **Sign In** to proceed.

Finally, you will be asked which programs you want to use this account with. The available options depend on the applications you have installed on your account.

That's it! You can now use your email account with the Mac Mail application.

How to back up and restore Outlook Express items ?

How to back up Outlook Express items

Step 1: Copy message files to a backup folder

Step A: Locate the Store folder

1. Start Outlook Express.
2. Click **Tools**, and then click **Options**.
3. On the **Maintenance** tab, click **Store Folder**.
4. In the **Store Location** dialog box, copy the store location. To do this, follow these steps:
 - a. Put the mouse pointer at one end of the box under the **Your personal message store is located in the following folder** box.
 - b. Press and hold the left mouse button, and then drag the mouse pointer across the **Your personal message store is located in the following folder** box.
 - c. Press CTRL+C to copy the location.
5. Click **Cancel**, and then click **Cancel** again to close the dialog box.

Step B: Copy the contents of the Store folder

1. Click **Start**, click **Run**, press CTRL+V, and then click **OK**.
2. On the **Edit** menu, click **Select All**.
3. On the **Edit** menu, click **Copy**, and then close the window.

Step C: Create a backup folder

1. Right-click any empty area on your desktop, click **New**, and then click **Folder**.
2. Type **Mail Backup** for the folder name, and then press ENTER.

Step D: Paste the contents of the Store folder into the backup folder

1. Double-click the **Mail Backup** folder to open it.
2. Right-click inside the **Mail Backup** folder window, and then click **Paste**.

Step 2: Export the Address Book to a .csv file

Important Make sure that you follow this step if you use multiple identities in Outlook Express.

Microsoft Outlook Express 5.x and Microsoft Outlook Express 6.0 use a Windows Address Book (.wab) file to store Address Book data. The individual data for each identity is stored in a folder by user name within the .wab file that is used.

The only way to separate the Address Book data for different identities is to export the data to a .csv file while you are logged in as a specific identity. If the .wab file becomes dissociated from the user identities, the data can be exported only as one total. In this case, the data cannot be exported folder by folder.

There is another reason to export the .wab file to a .csv file. If the .wab file not exported to a .csv file, but the .wab file is shared with Microsoft Outlook, the addresses are stored in the personal folders (.pst) file in Outlook. When you export the file to a .csv file by using the **File** menu in Outlook Express, the correct contacts are exported. However, if the Address Book is shared with Outlook, you cannot use the **File** menu option to export from the Address Book. This option is unavailable.

To export the Address Book to a .csv file, follow these steps:

1. On the **File** menu, click **Export**, and then click **Address Book**.
2. Click **Text File (Comma Separated Values)**, and then click **Export**.
3. Click **Browse**.
4. Select the **Mail Backup** folder that you created.
5. In the **File Name** box, type **address book backup**, and then click **Save**.
6. Click **Next**.
7. Click to select the check boxes for the fields that you want to export, and then click **Finish**.
8. Click **OK**, and then click **Close**.

Step 3: Export the mail account to a file

1. On the **Tools** menu, click **Accounts**.
2. On the **Mail** tab, click the mail account that you want to export, and then click **Export**.
3. In the **Save In** box, select the **Mail Backup** folder, and then click **Save**.
4. Repeat these steps for each mail account that you want to export.
5. Click **Close**.

Step 4: Export the newsgroup account to a file

1. On the **Tools** menu, click **Accounts**.
2. On the **News** tab, click the news account that you want to export, and then click **Export**.
3. In the **Save In** box, select the **Mail Backup** folder, and then click **Save**.
4. Repeat these steps for each news account that you want to export.
5. Click **Close**.

How to restore Outlook Express items

Note To restore items when you use multiple identities in Outlook Express, you may have to re-create the identities before you follow these steps. Repeat each step as needed for each identity.

Step 1: Import messages from the backup folder

1. On the **File** menu, point to **Import**, and then click **Messages**.
2. In the **Select an e-mail program to import from** box, click **Microsoft Outlook Express 5** or **Microsoft Outlook Express 6**, and then click **Next**.
3. Click **Import mail from an OE5 store directory** or **Import mail from an OE6 store directory**, and then click **OK**.
4. Click **Browse**, and then click the **Mail Backup** folder.
5. Click **OK**, and then click **Next**.
6. Click **All folders**, click **Next**, and then click **Finish**.

Step 2: Import the Address Book file

1. On the **File** menu, click **Import**, and then click **Other Address Book**.
2. Click **Text File (Comma Separated Values)**, and then click **Import**.
3. Click **Browse**.
4. Select the **Mail Backup** folder, click the **address book backup.csv** file, and then click **Open**.
5. Click **Next**, and then click **Finish**.
6. Click **OK**, and then click **Close**.

Step 3: Import the mail account file

1. On the **Tools** menu, click **Accounts**.
2. On the **Mail** tab, click **Import**.
3. In the **Look In** box, select the **Mail Backup** folder.
4. Click the mail account that you want to import, and then click **Open**.
5. Repeat these steps for each mail account that you want to import.
6. Click **Close**.

Step 4: Import the newsgroup account file

1. On the **Tools** menu, click **Accounts**.
2. On the **News** tab, click **Import**.
3. In the **Look In** box, select the **Mail Backup** folder.
4. Click the news account that you want to import, and then click **Open**.
5. Repeat these steps for each news account that you want to import.
6. Click **Close**.

How to configure Send-on-behalf-Of ?

Outlook 2007: to configure Send-on-behalf-Of Configure Outlook

1. Start Outlook
2. Go to "**Tools**" -> "**Options**"
3. Go to the tab "**Delegates**", press "**Add**"
4. Select the user which should receive the Send-On-Behalf-Of rights, press "**Add**" -> followed by "**OK**"
5. Select for all items the "**None**" permission. For **Inbox**, select "**Author**" or "**Editor**". Press "**OK**"
6. Press "**OK**"

Using Send-on-behalf-of

1. Start the Outlook profile of the user which received the Send-on-behalf-of rights.
2. Start writing a new e-mail
3. On the tab "**Options**", press "**Show From**" so it becomes Orange. The "**From**" field will appear. Enter in the "**From**" field the User from whom the e-mail should be sent.

How to prevent spam in my mailbox?

You can try to prevent spam in your mailbox in 2 ways: by being discrete with your e-mail address and by filtering your e-mails.

1. Do not leave your e-mail address everywhere. The less you hand out your e-mail address, especially on the internet, the smaller the risk of receiving spam. Only post your e-mail address on websites or forums that you trust.
 2. Only reply to e-mails that are safe. Do not reply to e-mails of which the sender seems suspicious. Remove these e-mails at once!
 3. Camouflage your address on your website. Replace "@" by for instance "at", use a contact form or hide your address behind an image.
 4. Protect your computer. Install a firewall, anti-virus software and use filtering for your e-mails. Also, do not forget to update your software to keep it efficient. The filtering on the mail server is done for you by Sahara Net.
-

I am travelling and I am unable send e-mails. What is the problem?

The network to which you are connected probably uses a different outgoing **mail server port** (SMTP server) than the one at your office. Make sure to enter the correct data in your e-mail client (ask the provider of the connected network). This is the general procedure so it may differ a bit in your particular case:

- Open your e-mail client.
- Click Tools or Options depending on the program.
- Select "E-mail accounts".
- Select an existing account and click Edit.
- Enter the correct data for the outgoing **mail server**. Usually, changing the Outgoing Mail Server (SMTP) port from 25 TO **587** will solve the problem. If not, please check with your ISP.

Someone sent me a mail, but I did not receive it. How so?

There may be different possible reasons why you cannot receive the e-mail. There are also a few tests that can help you find the problem:

- Check via **Webmail** if your **e-mails arrive on the server**. Also, check if you have an internet connection. If it arrives, then check the settings of your e-mail program.
- Mail servers can be (temporarily) **overcharged**. Try sending the mail again later.
- Grey listing** (Method to prevent spam. Has a delaying effect if a mail is sent for the first time to an addressee who has grey listing on the mail server.) can have a delaying effect.
- Ask the sender if he/she did not receive an **error message**. Maybe there was a typing error in the e-mail address? If necessary check also the catch-all mail address (standard: info@yourdomain.be)
- If the sender is sending from e.g. an internetcafé abroad, then it could be **blacklisted** on a spam list. Check if other people with a different hosting provider do receive e-mails.
- If you had your domain name expired (by paying too late or not at all) you will no longer be able to receive emails to that domain name.

What does Mail Quota Exceeded mean?

This means that your mailbox is full. Each mailbox has a limited size. You should remove **older emails on the server** so you can start receiving mails again. There is no point in removing mails in your local POP3 mail client.

A full mailbox may have various reasons:

- You received very large emails and you have not yet removed them from the server.
- You leave your mail on the server. This happens when you only use webmail to read your mail, or when you access the server through IMAP or if you access the server through POP3 but you have checked the option "leave a copy of message on the server".
- Also, pay attention when you create extra folders for your large mails. Maybe your inbox is empty and yet your mailbox is full. These folders also take up space!

There is limited tolerance. If you exceed this limit, **incoming mail will be blocked** as long as you use too much space.

You must check for new mail before sending mail.

550 5.7.1 Relaying denied: You must check for new mail before sending mail.

You need to configure Outlook to check for new mail before sending mail. Lowering your “check every xx minutes” time to 8 minutes or disabling Send Immediately may reduce the frequency of this error message.

This error occurs because your server uses the “pop before smtp” method for outgoing server security. When you check for new mail, your username and password is passed to the server and the authentication is valid for a period of time, usually 10 minutes. During this period you can use Send Immediately to send mail without also checking for new messages.

Outlook 2010

Go to File, Account Settings. On the Email accounts tab, double-click on the account then click More Settings. Look on the Outgoing Server tab.

Outlook 2007

In Outlook 2007, you need to go to Tools, Account Settings. On the Email accounts tab, double Click on the Account then click More Settings. Look on the Outgoing Server tab.

Outlook 2003

To check your settings in Outlook 2003, go to Tools, Email Accounts, View or change existing accounts and double-click on the account then click More Settings. Look on the Outgoing Server tab and choose the option to check for new mail before sending.

Mobile and Device Settings

How do I Set Up POP/IMAP Email on my Samsung Galaxy Tab™ 10.1?

. POP and IMAP Email Setup

POP and IMAP Email Setup

1. From the Home screen, touch **Applications** and then scroll to and touch **Email** . If you have not set up an account already, an email setup screen will display. If you have set up an email account already, skip to the **Adding Other Internet Email Accounts** section below.
2. Select the email service you would like to set up. If your provider is not listed, select **Others** and follow the steps below.
3. Enter your Email address and **Password**.
4. Touch **Next** and follow the on-screen prompts, and your device will complete the setup process automatically if your email server settings are available. Touch **Manual setup** to manually configure your connection settings. The information required will vary by email provider. If your provider's settings are not automatically loaded, you will be taken through the following steps.
5. Select the type of email account you are setting up. You may choose from **POP3 account**, **IMAP account**, or **Microsoft® Exchange ActiveSync®** . We'll walk through setting up a POP3 account. The steps for setting up an IMAP account may vary slightly. If you are trying to set up an ActiveSync account, please see the ActiveSync how-to guide.
6. Enter your **Incoming server settings**. This should include your **User name**, **Password**, **POP3 server**, **Security type**, **Port** number, and **Delete email from server** setting. Then touch **Next**.
7. Your device will attempt to connect to the Incoming server with the settings you have entered. If the connection is successful, you will be taken to the **Outgoing server settings** screen. Enter your outgoing server settings. This should include your **SMTP server**, **Security type**, **Port** number, **Require sign-in**, **User name**, and **Password**. Then touch **Next**.
8. Select your **Account options** and touch **Next**.
9. The first time you connect, you are asked to give this internet mail account a unique on-screen name and enter **Your name**. The unique account name is used to

differentiate this account from other email accounts on your mobile device.
Touch **Done** to complete the setup process.

Configuring Email Settings

With the Email app open, touch **Menu > Settings** and touch your account name.

These settings are available for customization:

- **General Preferences:**

- **Display after deleting message:** Select the screen shown after deleting a message.
- **Message preview line:** Select how many lines are shown when previewing a message.
- **Email header:** Select either the **Subject** or **Sender** for email title.
- **Confirm deletions:** Check this option to confirm a deletion of a message.
- **Quick responses:** Edit frequently used text in emails. For example, "I'll call you later" or "Let's meet for lunch."

- **Account Settings:**

Note: Account settings may vary depending on the type of account you are viewing.

- **Account name:** Displays the account display name.
- **Your name:** Displays the name shown in the from field of your outgoing emails.
- **Add Signature:** When marked, your device will automatically add the signature to all outgoing messages for this account.
- **Signature:** Edit the signature that will be sent.
- **Default account:** Assign this account as the default account used for outgoing emails.
- **Always Cc/Bcc myself:** Includes your email address in either the Cc or Bcc recipient field.
- **Forward with files:** Allows you to maintain any attachments while forwarding a message.

- **Show images:** Set the option to show all images when you are viewing emails.
- **Email check frequency:** Adjust the time interval your mobile device should connect and check your email server for new emails.
- **Period to sync email:** Specify how frequently to sync emails.
- **Size to retrieve emails:** Select the size you want to set your device to limit a message to when it is downloaded. The full message can be downloaded once you open the message.
- **Message format:** Select from **HTML** or **Plain text** email message format.
- **Email notifications:** Checking this box will cause an email notification icon to appear within the Notification Panel and the status bar when a new message for this account is received.
- **Select ringtone:** Assigns a custom ringtone to be played when this account receives new messages.
- **Vibrate:** Select the vibrate settings for incoming email messages.
- **Incoming settings:** Adjusts the incoming email server details.
- **Outgoing settings:** Adjusts the outgoing email server details.

Adding Other Internet Email Accounts

Touch **Menu > Settings > Add account** .

Removing an Email Account

1. Touch **Menu > Settings > Delete account** .
2. Touch the email account you wish to delete to add a check mark, and touch **Delete**.
3. Confirm you would like to delete this account by touching **Delete**.

How to configure Blackberry to access your email account?

This setup was created using a **Blackberry 9780** smartphone 3G running OS version 6.0. If you are using different hardware or a different OS version, these instructions may differ.

Configuration of your device

The steps below can be used to set up hover email on your Blackberry.

1. Beginning the Account Setup.

From your home screen, scroll down and tap **Setup**.

2. Tap **Email Accounts**.

3. Tap **Internet Mail Account**.

4. If you are shown this screen, tap **Set up another email account**. You will not see this screen if you do not have existing email accounts configured on your Blackberry.

5. Tap **Other**.

6. Entering the **Email Address** Details.

Enter your **email address** and **password**, then tap **Continue**.

7. A **processing** message will be displayed on your screen.

8. Tap **Change Settings**. Click on **Return to Setup** to complete the setup process.

Your **Blackberry 9780** smartphone device loads your incoming messages. You can now send and receive your email on your device!

How to configure Email for IOS 10 and above

Configure IMAP or POP Email on iPhone (iOS)

1. Click on the **Settings** button to your iPhone apps.
2. Click **Mail, Contacts, Calendars**.
3. Click **Add Account...**
4. Select **Other**.
5. Click **Add Mail Account**.
6. Fill out the requested fields.
 - **Name:** Your Name
 - **Address:** Your Full Email Address
 - **Password:** Email password.
 - **Description:** This is how your account will appear on your iPhone.
7. Click **Next**.
8. Enter additional server information as prompted.

IMAP vs POP3

Incoming Mail Server

- **Host Name:** mail. example.com * *replace "example.com" with your domain name.
- **User Name:** Your Full Email Address (IE: john@example.com)
- **Password:** Email Account Password

Outgoing Mail Server

Exact same settings as Incoming. 9. Click **Next**.

10. An error may appear stating "Cannot Verify Server identity". This is ok, Apple by default uses an SSL. Although there is an SSL activated on the mail servers it will not work without special settings. Click on **Continue** to get past the error. The error will appear twice (once for incoming and once for outgoing), please be sure to click continue both times.

11. For IMAP or POP ensure Mail is set to "On" and for Exchange use the sliders next to Mail, Contacts, Calendars to select which items you wish to synchronize.

12. Click **Save**.

13. If you are exited to the settings page for the account, open it up once more. You will want to set "Use SSL" to **Off** in the server or advanced settings page.

14. You can now click on the home button on the bottom of the iPhone then click on mail. Your iPhone will connect to the server and update mail. Remember this can take a few seconds if not a minute or two if you are on a mobile network. It is always quicker if you can connect to Wifi.

How to configure your Mac Mail version 4.4 (Included with Mac OS X 10.6) to access your email account ?

Explains how to configure your Mac Mail version 4.4 (Included with Mac OS X 10.6) to access your email account. If you are using different software version, these instructions may differ.

The steps below can be used to set up email on your Mac Mail version 4.4.

1. Beginning the Account Setup.

Open **Mail** (If it's not on your Dock, you'll find it in the Applications folder).

2. If this is the first time you've opened Mail, the Welcome to Mail window will appear automatically (continue to step 3).

Otherwise, go to the File menu at the top left side of your screen and select **Add Account...**

3. Fill in your **Full Name**, **Email Address** and **Password**. If you need help with these, there's more detail underneath the screenshot. Press **Continue** after you finish.

- **Full Name:** your name as you wish it to appear on your outgoing email messages

- **Address:** your email address

- **Password:** your email password

4. Now fill in the **Incoming Mail Server** details. If you need help with these, there's more detail underneath the screenshot.

- **Account Type:** select either POP or IMAP from the dropdown list.

- **Description:** enter a useful description of the email address you're setting up (e.g. Mums email). You can put whatever you want here

- **Incoming mail server:** mail.your_domain

- **User Name:** your email account

- **Password:** your email account password

5. You may see a warning screen like the one below, click **Continue**.

6. Make sure Use Secure Sockets Layer (SSL) is unticked, Authentication is set to **Password** and click **Continue**.

7. Now fill in the **Outgoing Mail Server** details. If you need help with these, there's more detail underneath the screenshot. After you finish click **Continue**.

- **Description:** enter a useful description of the email address you're setting up (e.g. Mums email). You can put whatever you want here
 - **Outgoing mail server:** mail.your_domain
 - If you want to use authentication when sending mail, tick Use Authentication and fill in your Accountusername and password.
 - **User Name:** your email account
 - **Password:** your email account password
8. Make sure Use Secure Sockets Layer (SSL) is unticked, Authentication is set to **None** and click **Continue**.
10. You'll see a **summary** of the details you've just entered.
Your Mac Mail version 4.4 loads your incoming messages. You can now send and receive your email on your email client!

How to configure your iPad to access your email account ?

This setup was created using a iPad running iOS 3.2. If you are using different hardware or a different OS version, these instructions may differ.

Configuration.

Follow the steps below to set up email on your iPad:

1. Tap the **Settings** button on your iPad home screen. If you have installed custom applications from the Apple AppStore, this button may be located on a different home screen than the one pictured. By default, it is on your main home screen.
2. This is the main Settings screen. You will need to scroll down to the section labeled Mail, Contacts, Calendars as pictured. Tap **Mail, Contacts, Calendars**.
3. If you have already configured an email account on your iPad, you will need to tap the **Add Account...** option. If you have not configured any mail accounts on your iPad you can skip to the next step.
4. Tap the **Other** option at the bottom of the list.
5. Complete the following fields and tap **Next** after you finish:
 - **Name:** your name as you wish it to appear on your outgoing email messages
 - **Address:** your email address
 - **Password:** your email password
 - **Description:** a description of your email account
6. Enter your **name** as you wish it to appear on your outgoing email messages, your **email address**, and your **email password**. The Description field can contain any description you want for your email account. Please tap **Save** once you finish.
7. Select **IMAP** or POP as desired (in this example will set up the device using IMAP):
8. Enter the following information in the **Incoming Mail Server** section:
 - **Host Name:** mail.your_domain
 - **User Name:** your email account
 - **Password:** your email account password
9. Enter the following information in the **Outgoing Mail Server** section:

- Host Name:** mail.your_domain
- User Name:** your email account
- Password:** your email account password

10. If you receive a certificate error message, like the below example, simply tap the **Continue** button:

11. Your iPad will now attempt to **verify** the details that you entered. This process may last a few minutes.

12. Next you will see the main **Settings** screen. You will need to scroll down to the section labeled Mail, Contacts, Calendars as pictured. Tap **Mail, Contacts, Calendars**.

13. Now your iPad is ready to receive your email!

In the Settings application, your account will be listed in the configuration section under Mail, Contacts, Calendar.

You can change the behavior of your mailbox by tapping the account name you just created and by changing the other options displayed.

How to configure your iPhone to access your email account?

This setup was created using an iPhone 4G running iOS 4.0. If you are using different hardware or a different OS version, these instructions may differ.

Configuration of your device

Follow the steps below to set up email on your iPhone.

1. Tap **Settings** on your home screen:
2. Scroll down and tap **Mail, Contacts, Calendars**.
3. Tap the **Add Account** option.
4. Tap **Other**.
5. Tap **Add Mail Account**.
6. Enter the following settings and tap **Next** after you finish:

Name: is the name displayed when you send email

Address: is your full email address ID@your_domain.com

Password: is your email account password

Description: is account description of your choice

7. Tap **IMAP** or **POP** (in this example will set up the device using IMAP):

8. Under the **Incoming Mail Server** section, enter the following settings:

Host name: is mail.your_domain

User name: is your full email address

Password: is your email account password

Scroll down to the **Outgoing Mail Server** section

9. Under the **Outgoing Mail Server** section, enter the following settings and tap Next after you finish:

Host name: is mail.your_domain

User name: is your full email address

Password: is your email account password

10. Your device will verify your email account settings. This may take several minutes.

11. If you receive an error indicating that you Cannot Connect Using SSL then tap Yes to continue without SSL.
12. Completing Account Configuration - tap **Save**
13. Your iPhone may display this screen briefly stating that it has **Configured sync**.
14. The email account configuration has been completed!

Sahara Website Builder

How to integrate "Google Maps"?

1. Adding Google maps:

- Drag & drop "Maps" from main toolbar;
- Choose Google maps composition;
- Write "Address" and "API Key" in right toolbar.

2. Customising maps:

▪ Zoom level:

Set zoom level in right toolbar.

▪ Size:

Set map size or "Allow to adjust size automatically" in right toolbar.

▪ Map theme and type:

Choose map theme and map type in right toolbar.

▪ Options:

Choose options that you would like to show or allow in right toolbar.

How to use "Gallery Background"?

1. Adding gallery:

- Drag & drop "Gallery" from main toolbar;
- Choose Background gallery composition;
- Select gallery layout and click Background element editing button in right toolbar;
- Click "Gallery Pictures" ;
- Click "Add Pictures" to upload pictures;
- Click "Size" in right toolbar;
- Set gallery size or "Allow to adjust size automatically" in right toolbar.

2. Customising gallery:

- Select gallery layout and click Background element editing button in right toolbar;

▪ Gallery pictures:

Click "Gallery Pictures" to edit pictures title, link, etc.;

▪ Background:

Click "Background colour" to choose background colour/opacity;

▪ Border:

Click "Border" to choose width, colour, etc.;

▪ Gallery types:

Change gallery type and adjust available features for each type;

▪ Captions:

Select "Captions" tab. Set how to show picture caption, caption background colour, etc.;

▪ Options:

Select "Options" tab. Write anchor name, class name, etc.

How to use "Menu"?

1. Adding Menu:

- Drag and drop Menu from main toolbar;
- Choose Menu composition;
- Click "New Menu Item":
 - Select type of menu item (e.g., "Page");
 - Enter "Name";
 - Select from dropdown list "Copy layout from" (e.g., Home);
 - (Optional) Select section that needs to be clear;
 - Click "Apply".

2. Customising Menu:

- **Select type of menu item:**
 - **Page on your website.**
Select page from dropdown list.
 - **Web Address.**
Enter URL.
 - **File from your Website.**
Click and select file from gallery or "Upload New File".
 - **E-mail address.**
Enter e-mail address.
 - **Phone Number.**
Enter phone number together with country code.
 - **Popup.**
Select popup page from dropdown list or click to create "New Popup".
 - **Empty.**
Leave the menu item empty.
 - Select additional options to "Open in a New Window", etc.
- **Submenu:**

Drag your created element to required location or on top of a menu element to create a submenu.

Important to note:

- By default, if menu is placed in "Header" or "Footer" section of the website, it will be shown on all pages.
- If menu is in "Body" section of the website, select "Visibility" and select how to show your menu.
- Once a menu item is added, a new page is automatically created.
- To remove a menu item, click on green X button on left side of the menu panel. By default, removing a menu item does not remove linked page (unless appropriate setting is selected).

"Form sending failed. (4): SMTP connect() failed"

If you get this error when sending mail from your website, it usually means one of these:

SMTP data is incorrect (double-check username and password, make sure that you specified correct host and port).

Firewall on your hosting server blocks outgoing connections from specified SMTP host and/or port. Contact your hosting support and describe this problem to fix the issue.

Specified SMTP host (in case if it is a domain — not IP) is not resolved on your hosting server or resolved to a wrong IP address. Contact your hosting support and describe this problem to fix the issue.

How to add files to your website (ex.: .pdf, .docx, etc.)?

To add files to your website, you can upload them to gallery.

Types of files that can be added to your website:

- **Image:**

'jpg', 'jpeg', 'gif', 'png', 'svg', 'webp'

- **Video:**

'ogg', 'mp4', 'mpeg', 'avi', 'flv', 'mkv', 'mov', 'webm'

- **Favicon:**

'jpg', 'jpeg', 'gif', 'png', 'ico', 'svg'

- **Audio:**

'mp3', 'aac', 'wav', 'ra', 'midi', 'ram', 'wma', 'ogg', 'ape'

- **Other documents:**

'pdf', 'docx', 'doc', 'xls', 'xlsx', 'rtf', 'ppt', 'pptx', 'odt', 'txt', 'csv', 'html', 'xml', 'js', 'yaml', 'rar', 'zip', 'tar', 'gz', 'eps', 'cdr'

How to add new page?

1. Adding new page:

- Select "Settings" at top of website builder and select "Pages";
- Select "New Page";
- Select page type;
- Write page "Name";
- Select from dropdown menu which page layout to copy;
- (Optional) Select section that needs to be clear;
- Click "Apply".

2. Customising new page:

- Make page as home page, do not index or show popup when page is open;
- Add SEO to your page:
Title, description, etc.;
- Add page background;
- Add custom script.

How to change template?

1. Login to your account and go to Sahara Builder page;
2. Click "Edit Website";
3. Click "New/Reset" dropdown list at top of builder;
4. Select "Change template" and choose from templates available or create website from "Blank Template".

Note: All components disappear when template is changed.

How to edit my website while the "Under construction" page is online?

Website has not been created:

1. Select the required "Under construction" template;
2. Edit website;
3. Click "Publish" at the top of website builder;
4. Click "New/Reset" dropdown list at the top of website builder and select "Change template";
5. Select new template;
6. Check the checkbox "Got it" and click "Yes, change template";
7. Edit your website, but don't publish it until it's finished.
Use "Preview" button to view your website.
Select "Publish" dropdown list at the top of website builder and select "Save Draft" to save your progress.

Hiding website while it is being created/updated:

1. Save backup of your current website;
2. Select "New/Reset" dropdown list at the top of website builder and select "Change template";
3. Select "Under construction" template;
4. Check the checkbox "Got it" and click "Yes, change template";
5. Edit website;
6. Select "Publish" dropdown list at the top of website builder and select "Backup / Restore" option;
7. Restore backup of website you want to continue editing;
8. Edit your website, but don't publish it until it's finished.
Use "Preview" button to view your website.
Select "Publish" dropdown list at the top of website builder and select "Save Draft" to save your progress.

How to enable and customize the 404 page?

This page will be shown to a visitor when they try to reach a non-existent page on your website.

How to enable the 404 page?

- Hover over "**Settings**" button above the main toolbar and click "**Pages**";
- Select greyed out "**Custom 404 page**" option;
- Check "**Enabled**" box;
- Click "**Apply**" to save changes.

How to customize the 404 page?

- Hover over page selector dropdown menu above the main toolbar and select "**Custom 404 page**" (once enabled);
- Customize page to your liking (as you would with any other page);
- **Publish website** to reflect any changes made to the 404 page.

How to enable and customize the Maintenance page?

This page will be shown to a visitor when they try to reach any page on your website while Maintenance Mode is enabled.

How to enable the Maintenance page?

- Hover over "**Settings**" button above the main toolbar and click "**Pages**";
- Select greyed out "**Custom Maintenance page**" option;
- Check "**Enabled**" box;
- Click "**Apply**" to save changes.

How to customize the Maintenance page?

- Hover over page selector dropdown menu above the main toolbar and click "**Custom Maintenance page**" (once enabled);
- Customize page to your liking (as you would with any other page);
- **Publish website** to reflect any changes made to the Maintenance page.

How to enable and customize the Maintenance page?

This page will be shown to a visitor when they try to reach any page on your website while Maintenance Mode is enabled.

How to enable the Maintenance page?

- Hover over "**Settings**" button above the main toolbar and click "**Pages**";
- Select greyed out "**Custom Maintenance page**" option;
- Check "**Enabled**" box;
- Click "**Apply**" to save changes.

How to customize the Maintenance page?

- Hover over page selector dropdown menu above the main toolbar and click "**Custom Maintenance page**" (once enabled);
- Customize page to your liking (as you would with any other page);
- **Publish website** to reflect any changes made to the Maintenance page.

How to use "Form"?

1. Adding form:

- Drag & drop "Form" from main toolbar;
- Choose form composition.

2. Customising form:

- **Form:**
 - Select form and choose **"Edit Form"** in right toolbar.
 - Select **"Type"** to choose the field type.
 - Write **"Name"** to name the field.
 - (Optional) Write **"Placeholder"** to give a placeholder text to the field.
 - (Optional) Select **"Required"** to make the field required.
 - To change field order, drag and drop using arrow symbol on the left.
 - If additional fields are required, choose **"Add Option"**.
 - Select **"Apply"** to save changes.
 - Write email(s) for the form to be sent from and to.
 - Write email subject, form sent message.
 - (Optional) Set to **"Submit to URL instead"** to have your form data sent to URL.
 - Select **"Inquires"** to view received form replies.
- **Button:**
 - Write submit button text.
 - Select near **"URL after submit"** to insert URL or select a page on your website, if needed select **"Open in a New Window"**.
 - To customise the button more, use **"Align"**, **"Font"**, **"Style"**, **"Colour"**, **"Background"**, **"Border"**, **"Shadow"**, and **"Spacing"** options.
- **Fields:**
 - Select **"Font"** to customise the font of the fields.

- Select "Background" to change field background.
- Select "Border" to add borders to fields.
- Select "Spacing" to adjust the field spacing.
- **Labels:**
 - Select "Font" to customise the font of the labels.
 - Select "Label Column Width" to change label size.
 - Adjust label position by selecting "Left", "Above", or "As placeholder".
- **SMTP:**
 - Click "SMTP Enable" to enable SMTP.
 - Write "SMTP Host" and "SMTP Port".
 - Select "SMTP Encryption".
 - Write "SMTP Username" and "SMTP Password".
- **Google reCAPTCHA (v2):**
 - Write "Site key" and "Secret key" in right toolbar to add Google reCAPTCHA.
- **Size:**
 - Set form size or "Allow to adjust size automatically".

How to use "Video"?

There are several options how to insert video to the website :

Option 1 (insert media player, e.g., YouTube):

- **Adding Youtube:**
 - Drag & drop "Media" from main toolbar;
 - Choose Youtube composition;
 - Write "URL or ID" in right toolbar.
- **Customising video:**
 - **Size:**

Adjust video size or "Allow to adjust size automatically" in right toolbar.

- **Option 2 (upload video from your computer, it will be played as a background):**
 - Select "Shape" widget and choose shape composition;
 - Click background in right toolbar;
 - Choose Image/Video and click ;
 - Click "Upload New File", choose video, click open, and click "Select";
 - Under the video choose the backgrounds video settings: opacity; start time and end time;
 - Video will be played with no sound.
Note. You can just drag and drop video file from your computer to website builder.

Option 3 (upload video from your computer):

- Select "Advanced" widget and choose "Custom Html";
- In the right toolbar "Custom Html" tab, select HTML code by clicking on a pencil icon;
- Insert this code:

```
<video style="width: 100%; height: 100%; position: relative; z-index: 2;" src="VIDEO_FILE" controls>
```
- Your browser does not support the video tag.

</video>

- Select "VIDEO_FILE" (without quotes) and delete it;
- Click "Click to add file(s)" button in top right corner to choose your video file;
- Click "Upload New File", choose video, open, click "Select", and click "Apply" button;
- Video will be played with sound.

How to use background image/video?

Background can have an image/video uploaded:

1. Option 1:

- Upload it as background gallery.

2. Option 2:

- Select layout and select background ;
- Select image/video and upload video;
- Adjust opacity;
- Select position, choose what position picture will start from;
- Select repeat options. Horizontally or vertically to have image/video repeat for horizontal/vertical position;
- Select "Don't scroll background" to have background at the same position;
- Select "Offset" to move image/video from the starting point;
- Select "Auto" to have auto resize picture and select if the picture is going to be stretched to fit the layout or it is going to fit as it is.

How to use layout positioning?

1. Drag & drop "Layout" from main toolbar;
2. Choose layout composition;
3. Select one of the following layouts in right toolbar:
 - **Horizontal Layout:**
 - Element alignment is horizontal.
 - **Vertical Layout:**
 - Element alignment is vertical.
 - **Floating Block:**
 - Element alignment does not have a strict structure.
Note. No additional layouts should be added to floating block.

I am not receiving mails from contact form

The problem may occur when you are using field **Form will be sent from this Email** in form configuration in builder. For example, you use address in this field **example@mysite.com**. Then mails may not be received on your email account due to the fact that domain **mysite.com** does not have DNS record of type SPF (for more details, please see https://en.wikipedia.org/wiki/Sender_Policy_Framework). Due to this mails can be blocked by mail servers. If you are an owner of domain "mysite.com", you need to add SPF record in DNS configuration of your domain.

When you do not have field "Form will be sent from this Email" filled in, the address **no-reply@mysite.com** is used (where "mysite.com" is replaced with your website domain name). In this case the reason of not receiving mails is the same as described above.

What E-commerce features does website builder have?

1. Different customer experience:

- a. 1-click-purchase;
- b. Catalogue with Inquiry form;
- c. Full E-commerce with Cart.

2. Product Management:

- Products (images, SKU, price, etc.);
- Categories (for menu and filters);
- Item Types (e.g., phones, monitors, etc.);
- Product variations (e.g., colours);
- Different listing options;
- Different filters.

3. Store Management:

- Order management;
- Currencies and formats;
- Automatic invoice system;
- Shipping and delivery options;
- Stock management (Qty);
- Customisable tax system (netto/brutto prices).

4. 40+ payment gateways;

5. E-commerce Templates:

Ready Templates; Designing from scratch; Easy integration to any template.

6. Additional features:

- Terms and conditions;
- Multiple languages;
- SEO (including microdata).

What SEO features does website builder have?

Sahara Net Builder provides ALL the features to make your website maximum friendly for search engines:

1. Meta information:

- Title;
- Description;
- Keywords.

2. Pages:

- User-friendly URL.

3. Tracking tools:

- Facebook Pixel;
- Google Analytics;
- Yandex Metrika;
- Google Tag Manager;

5. robots.txt;

6. .htaccess;

7. Sitemap;

8. HTML;

9. SSL;

10. Domain:

- Business-Friendly;
- Relevant Domain Zone.

11. Speed.

What is Sahara Website Builder?

It is tool that allows you to easily create an entire website using a drag-and-drop editor and without knowing any code or installing special software.

There are two versions: a paid version and a free version. Anyone who signs up for hosting can access the paid service.

Why is my website reset?

There are two causes for the website to be reset:

[REASON 1] You accidentally pressed "Reset" or "Change template" button. Check if you have manual or automatic backup enabled. Hover on "Publish" icon and you will see "Backup / Restore" item;

[REASON 2] You closed the website builder without pressing "Save draft" after creating a website. Always make sure you saved your website before closing the browser tab. We also advise to make website backups regularly.

YouTube player displays 'An error occurred. Please try again later. Playback ID'

What causes the 'An error occurred' error in YouTube player?

There are a few possible causes:

- Internet connectivity issues;
- Browser files that are corrupted;
- DNS data caching;
- Automatic DNS issues.

How to fix 'An error occurred' error in YouTube player?

Based on the cause, you may need to:

- Restart your network device (e.g., router);
- Clear browser cache;
- Disable browser extensions;
- Flush DNS cache;
- Switch to Google DNS;
- Reinstall internet browser;
- Use a different browser or device;
- Contact your internet service provider (ISP).

(8) النطاقات السعودية - Saudi Domains

ما هي مدة تسجيل النطاق السعودي؟ For how long can I register a Saudi domain?

The domain name registration period must not be shorter than one year and no longer than ten years. You can choose any period within this range when registering through Sahara Net.

يجب ألا تقل مدة تسجيل النطاق عن سنة واحدة ولا تزيد عن عشر سنوات. يمكنك اختيار أي مدة ضمن هذا النطاق عند التسجيل عبر صحاري نت

كيف يمكنني تحديث بيانات النطاق في حال تعذر الوصول إلى المدير الإداري؟
How can I update domain details if the administrator is unreachable?

In case you cannot access the administrative contact, you may open a ticket and submit an **official letter stamped by the Chamber of Commerce** requesting the update of the administrative contact information. Once received and reviewed, we will proceed accordingly.

في حال عدم القدرة على التواصل مع جهة الاتصال الإدارية، يمكنك فتح تذكرة وتقديم خطاب رسمي مختوم من الغرفة التجارية يطلب تحديث بيانات جهة الاتصال الإدارية. بعد استلام الطلب ومراجعته، سيتم اتخاذ الإجراء اللازم.

كيف يمكنني تحديث خوادم الأسماء؟ لنطاقي؟ (Nameservers)

You can update your domain's nameservers by following these steps:

- 1. Log in to your Sahara net [account](https://shop.sahara.com/index.php/login). "https://shop.sahara.com/index.php/login"
- 2. Go to Domains.
- 3. Select My Domains.
- 4. Choose the domain you want to update.
- 5. From the side menu, click on Nameservers.
- 6. Enter your custom nameservers and save the changes.

After submitting your request, a **verification link** will be sent to the domain administrator's email, and a **confirmation code** will be sent to the administrator's mobile number.

يمكنك تحديث خوادم الأسماء باتباع الخطوات التالية:

- 1. تسجيل الدخول إلى: [حسابك في صحاري نت](#).
- 2. الانتقال إلى النطاقات
- 3. اختيار إدارة الدومينات
- 4. تحديد النطاق الذي ترغب بتحديثه.
- 5. من القائمة الجانبية، الضغط على اسماء الخوادم.
- 6. إدخال خوادم الأسماء المخصصة وحفظ التغييرات.

بعد إرسال الطلب، سيتم إرسال **رابط تحقق** إلى البريد الإلكتروني لمدير النطاق، كما سيتم إرسال **رمز تأكيد** إلى رقم جوال مدير النطاق. بعد تأكيد الطلب من قبل مدير النطاق، سيتم تطبيق التحديث. يرجى ملاحظة أن تحديث خوادم الأسماء قد يستغرق حتى **24 ساعة** بعد الموافقة.

How should I explain the relationship between the domain name and my business? كيف يجب توضيح العلاقة بين اسم النطاق ونشاطي التجاري؟

When submitting a domain registration request, please clearly include the following information to help us understand the relationship between your domain name and your business:

- What the domain name represents or stands for.
- How the domain name is connected to your business, brand, or activity.
- The purpose of registering the domain and the services that will be offered under it.
- The intended target audience for those services.

عند تقديم طلب تسجيل النطاق، يرجى توضيح المعلومات التالية بشكل واضح لمساعدتنا على فهم العلاقة بين اسم النطاق ونشاطك التجاري:

- ماذا يمثل اسم النطاق أو ما الذي يشير إليه.
- كيفية ارتباط اسم النطاق بنشاطك التجاري أو علامتك التجارية.
- الغرض من تسجيل النطاق والخدمات التي سيتم تقديمها من خلاله.
- الفئة المستهدفة من هذه الخدمات.

ما هي خدمات إدارة النطاقات التي نقدمها؟ What are the domain management services that we offer?

We provide a range of domain management services to help you manage and secure your domain effectively, including:

- Nameserver Management: You can update where your domain points by using default nameservers or custom nameservers.
- Registrar Lock: Lock your domain to prevent unauthorized transfers.
- Contact Information Management: Update and manage domain contact details, including: Registrant, Administrative, Technical and billing contact.
- Private Nameservers: You can create and manage private nameservers (e.g., NS1.example.com, NS2.example.com) only if you are using Sahara Net hosting services, such as VPS. If your hosting provider is external, private nameservers must be registered and linked to the server IP address through your hosting provider before they can be used with the domain.
- DNS Manager: Manage DNS records such as A, CNAME, MX, and TXT records.
- DNSSEC Management: Enable and manage DNSSEC for enhanced domain security.
- EPP Code (Authorization Code): Generate an EPP code for domain transfer purposes.
- Domain Ownership Certificate: Request an official certificate proving domain ownership.
- Change Ownership / Delete Domain: Submit requests to change domain ownership or delete a domain, subject to applicable policies.
- Renew Your Domain

What documents are required to register a new domain?

To register a new domain, you must submit a copy of an official Saudi document that proves the connection between your chosen domain name and your registered entity. You may provide any one of the following:

- **Commercial Registration:** A commercial registration issued by the Saudi Ministry of Commerce.
- **Trademark:** A trademark issued by a Saudi authority.
- **License:** A valid license of any type (such as a Balady license, Ministry of Justice license, or others) issued by a Saudi authority.

If you are registering a **personal domain**, you only need to verify your national ID through Nafath, and the domain must match your first and last name. You do not need to upload a copy of your national ID or Passport.

ما هي المستندات المطلوبة لتسجيل نطاق جديد؟

جديد، يجب تقديم نسخة من مستند سعودي رسمي يثبت وجود علاقة بين اسم النطاق المطلوب والجهة المسجلة. يمكنك تقديم أحد المستندات التالية

- السجل التجاري: سجل تجاري صادر من وزارة التجارة السعودية.
- العلامة التجارية: علامة تجارية مسجلة وصادرة من وزارة التجارة السعودية.
- الرخصة: رخصة سارية المفعول من أي نوع (مثل رخصة بلدية، رخصة من وزارة العدل، أو غيرها) صادرة من جهة حكومية سعودية.

لتسجيل نطاق شخصي يكفي التحقق من الهوية الوطنية عبر منصة **نفاذ**، ويجب أن يتطابق اسم النطاق مع الاسم الأول واسم العائلة. لا يلزم رفع نسخة من الهوية الوطنية أو جواز السفر

نقدم مجموعة متكاملة من خدمات إدارة النطاقات لمساعدتك على إدارة نطاقك وتأمينه بفعالية، وتشمل:

- إدارة خوادم الأسماء (Nameservers): تحديث توجيه النطاق باستخدام خوادم افتراضية أو مخصصة.
- قفل المسجل (Registrar Lock): حماية النطاق من عمليات النقل غير المصرح بها.
- إدارة معلومات الاتصال: تحديث وإدارة بيانات جهات الاتصال الخاصة بالنطاق (المالك، الإداري، الفني، والفوترة).
- خوادم أسماء خاصة (Private Nameservers): إنشاء وإدارة خوادم أسماء خاصة (مثل NS1.example.com و NS2.example.com) في حال استخدام استضافة صحاري نت فقط. إذا كان مزود الاستضافة خارجيًا، فيجب تسجيل خوادم الأسماء وربطها بعنوان IP الخاص بالخادم عبر مزود الاستضافة قبل استخدامها.

- DNS: إدارة سجلات DNS مثل A و CNAME و MX و TXT.
- DNSSEC: تفعيل وإدارة DNSSEC لتعزيز أمان النطاق.
- رمز EPP (نقل النطاق): إنشاء رمز EPP لغرض نقل النطاق.
- شهادة ملكية النطاق: طلب شهادة رسمية تثبت ملكية النطاق.
- تغيير الملكية / حذف النطاق: تقديم طلبات تغيير ملكية النطاق أو حذفه وفقًا للسياسات المعتمدة.
- تجديد النطاق.

ماذا يحدث إذا لم أقم بتجديد النطاق؟
What happens if I don't renew my domain on time?
في الوقت المحدد؟

our domain will be suspended or deleted if you fail to pay fees or dues owed, or fails to renew a domain name registration. Renewals can be done for 1 to 10 years, with a 30-day grace period for late renewals, but no restoration option is available after expiration. It's strongly recommended to renew your domain before the expiry date to avoid losing it.

سيتم إيقاف أو حذف النطاق في حال عدم سداد الرسوم المستحقة أو عدم تجديد تسجيل النطاق يمكن تجديد النطاق لمدة تتراوح بين سنة واحدة إلى عشر سنوات، مع وجود فترة سماح 30 يومًا للتجديد المتأخر بعد انتهاء فترة السماح، ننصح بشدة بتجديد النطاق قبل تاريخ الانتهاء لتجنب فقدانه

ما هي شروط ما هي شروط؟
What rules determine if my Saudi domain name will be accepted?
التي تحدد قبول اسم النطاق السعودي؟

To have your Saudi domain name approved, it must be clearly linked to the registered entity. Below are some examples of acceptable domain names:

- The domain name matches the company name registered in the Commercial Registration (CR).
- The domain name is an abbreviation of the company name registered in the CR (e.g., using the first letter of each word or a common abbreviation such as “CO” for Company).
- The domain name includes the business activity, provided that the activity is written in full without abbreviations.
- The domain name matches the name registered in a trademark issued by the Saudi Authority for Intellectual Property (SAIP).
- For personal domains: The domain name must match your first and last name.

Please note that additional factors may also affect the approval of a domain name, and each request is subject to review based on the applicable policies and regulations.

للموافقة على اسم النطاق السعودي، يجب أن يكون مرتبطاً بشكل واضح بالجهة المسجلة. فيما يلي أمثلة على أسماء نطاقات مقبولة

أن يطابق اسم النطاق اسم الشركة المسجل في السجل التجاري.

أن يكون اسم النطاق اختصاراً لاسم الشركة المسجل في السجل التجاري (مثل استخدام الحرف الأول من كل كلمة أو اختصار شائع مثل “CO”).

أن يحتوي اسم النطاق على النشاط التجاري مكتوباً بالكامل دون اختصارات.

أن يطابق اسم النطاق الاسم المسجل في علامة تجارية صادرة من الهيئة السعودية للملكية الفكرية (SAIP).

للتطابقات الشخصية: يجب أن يطابق اسم النطاق الاسم الأول واسم العائلة (مثل MohammadSalem.sa)

يرجى ملاحظة أن هناك شروط إضافية قد تؤثر على قبول اسم النطاق، وتخضع جميع الطلبات للمراجعة وفقاً للسياسات واللوائح المعتمدة

Shared Hosting Linux

cPanel Software

How to change PHP versions

MultiPHP enables you to use multiple versions of PHP on your server at the same time. To do this, follow these steps:

1. Log in to cPanel.
2. Open MultiPHP Manager:
 - o If you are using the **Jupiter** theme, on the Tools page, in the Software section, click MultiPHP Manager:
 - o If you are using the **Paper Lantern** theme, in the SOFTWARE section of the cPanel home page, click MultiPHP Manager:
3. If you do not see MultiPHP Manager, your server does not support this feature.
4. Under System PHP Version, cPanel displays the default PHP version for your server. Any domain that does not have a PHP version explicitly set uses this version.
5. To change the PHP version for a domain, under Set PHP Version per Domain, select the check box next to the domain for which you want to change the PHP version:
6. In the PHP Version list box, select the PHP version you want to use for the domain, and then click Apply:
7. The new PHP version for the domain takes effect immediately

How to manage PHP extensions on cPanel?

Your Hosting Account's PHP extensions can be managed at any time, in order to do that simply access your **cPanel** → **Software** section → **Select PHP Version:**

SOFTWARE

Cloudflare

WordPress Manager by
Softaculous

Application Manager

Free Shopping Cart

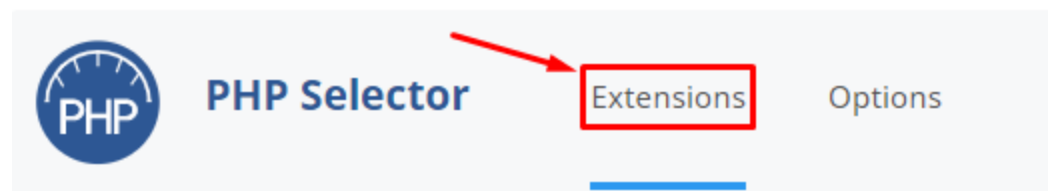

Select PHP Version

Setup Ruby App

On the newly opened page, select the **Extensions** tab:

There you will be able to see a list of extensions that can be enabled or disabled depending on your needs, just simply click on the checkmark to enable or disable it:

A ☐ apcu	I ☐ intl	P ☒ pdo	S ☐ sourceguardian
B ☒ bcmath	☒ ioncube_loader	☐ pdo_dblib	☐ sqlsrv
☐ brotli	J ☒ json	☐ pdo_firebird	☐ ssh2
D ☐ dba	L ☐ ldap	☐ pdo_mysql	☐ stats
☐ dbase	☐ luasandbox	☐ pdo_oci	☐ swoole
☒ dom	☐ lzf	☐ pdo_odbc	☐ sysvmsg
		☐ pdo_pgsql	☐ sysvsem

All of the extensions are sorted alphabetically so it's really easy to find them.

Email

How Do I Create Email Accounts in cPanel?

By default, you have no email account set up. The main username may look like it is set up as an email, but you will need to add it as an email account if you wish to use it.

To create an email account:

1. Log in to cPanel.
2. Look for the **Email** section, then click **Email Accounts**.
3. Click the **+ Create** button located on the right-hand side.
4. On the next page, enter the required details to create a new email account.
 - **Domain:** Select the domain where you wish to create the new email account.
 - **Username:** Enter your email's username.
 - **Password:** Enter your email's password.
5. You will notice the **Optional Settings**. Click the **Edit Settings** button to customize the new email account. This is where you can set your email's storage space.
6. Click **+ Create** to finalize.

How To Create Forwarders

This email feature allows you to configure an email account to forward incoming emails to another address.

To create an email forwarder:

1. Navigate to the **Email** section, then click **Forwarders**.
2. On the Forwarders page, click the **Add Forwarder** button.
3. On the next page, fill out the **Address to Forward** text box. This is the username to which you want to forward the incoming email.
4. Select the domain of your email account.
5. Select any of the following **Destination** options.
 - **Forward to email address:** This option forwards incoming emails to another address. Provide the forwarding address in the text box.
 - **Discard and send an error to the sender (at SMTP time):** This option discards incoming email and automatically sends a failure message to the sender. You may enter your preferred failure message in the **Failure Message** text box.
6. You can click the **Advanced Options** to configure additional options.
 - **Forward to a system account:** This option forwards an incoming email to a system user. Please note that system accounts do not have a public-facing email address.
 - **Pipe to a Program:** This option automatically forwarding an incoming email to a program through a path provided in the text box.
 - **Discard (Not Recommended):** This option discards incoming emails without sending a failure message to the sender.
7. Once done, click the **Add Forwarder** button.

How do I add DMARC record for my domain?

Before activating a DMARC policy for your domain, make sure that the SPF record is set correctly.

Setting up a DMARC record requires you to choose how suspicious emails are handled. Emails are considered suspicious when they don't conform to the domain's SPF and DKIM settings.

Policy options (p) are:

- **none:** no action is performed on the message;
- **quarantine:** messages are marked as spam and moved to the Spam folder of Qboxmail;
- **reject:** the recipient server is required to reject the message.

We recommend activating DMARC policies gradually, starting from 'None', followed by 'Quarantine' and 'Reject'.

An example of DMARC record could look this:

**v=DMARC1; p=quarantine; rua=mailto:rua@dmARC.qboxmail.com;
 ruf=mailto:ruf@dmARC.qboxmail.com**

This record instructs recipient servers to mark suspicious messages as spam and sends the daily report to the address rua@dmARC.qboxmail.com.

To apply the above record, it is necessary to create a TXT type record in the domain DNS:

Record Name	Record Type	Value
_dmARC.	TXT	v=DMARC1; p=quarantine; rua=mailto:rua@dmARC.qboxmail.com; ruf=mailto:ruf@dmARC.qboxmail.com

Qboxmail interprets and applies the DMARC policies set by the sender but does not include the sending of daily XML reports.

How do I enable DKIM Record in cPanel?

tep 1 - Enable DKIM record from cPanel

Log into cPanel and click "Email Deliverability" under the "Email" section.

Step 2

You will be redirected to a page with a list of domains and their respective deliverability status. Click on the "Manage" button displayed for the domain you wish to add/modify the DKIM record.

Step 3

Scroll down to "DKIM" section. There, you will find boxes that are mentioned as Name and Value, which will be automatically generated by the cPanel server. The Name section will have the "selector.domain_name.com" mentioned and the "Value" section will have the DKIM record for the server.

Both these sections can be used to edit the DKIM that's generated. When done, click on "Install the Suggested Record".

Step 4

You are all done here! The DKIM record is now added to your domain's DNS. You can verify the added record.

Files

How to use File Manager in Cpanel?

In this guideline, you will find detailed instructions how to manage (add, delete, view, modify) files from your cPanel account using **File Manager**.

How to access File Manager

1. Log into your **cPanel** account and navigate to **Files** section >> **File Manager** menu:
2. You will be taken **/home/user** directory by default. Feel free change the default directory in **Settings** menu:

Here you can also enable **Show Hidden Files (dotfiles)** option. In this way system files, like .htaccess, will be displayed in File Manager as well:

The **public_html** folder is the web root for your primary domain name. This means that public_html is the folder where you put all website files which you want to appear when someone types your main domain (the one you provided when you signed up for hosting).

If you wish to upload files for your addon domain, you will need to move to **home/user/youraddondomain.com** directory. This directory is created automatically on adding an addon domain to the cPanel account.

3. The interface of **File Manager** is divided into 4 sections:

- #1 The file manager toolbar
- #2 The file window
- #3 The navigation toolbar
- #4 Current location window

In the first section, you can find a **toolbar** with all the basic functions for managing files like create a new folder, delete a file, upload/download and much more.

The second is the **file listing** section, it displays the content of the selected directory. If no files or folders are created, the following message will be displayed in the file window This directory is an empty message.

The **navigation toolbar** section allows navigating between folders in the file window.

The **location** section shows the directory you are currently located in.

4. To **Upload** a file:

- Go to **File Manager**
- Navigate to the folder you wish to upload the file(s) to
- Click on **Upload** icon
- Click **Select File** and locate the file on your local machine
- Select the file and click on **Open/Choose**
- Or simply drag and drop the needed file from your local machine to the upload window

5. To **Copy/Move** a file:

- Go to **File Manager**
- Select the file(s) you wish to copy/move (to select multiple files, hold the Ctrl+Command button)
- After the needed items are selected, hit **Copy** or **Move** icon
- Or right-click on the selected file(s) and choose **Copy** or **Move** option from the drop-down menu
- Once done, the confirmation window with the final destination will pop-up

6. To **create a new file**:

- Go to **File Manager**
- Navigate to the folder where you wish to create a file
- Click on **+File** icon – a new pop up box will appear to enter the name of the file you wish to be created
- Click the **Create New File**

7. To **Delete** a fi

- Go **File Manager**

- Navigate to the folder where the file(s) you wish to delete is located
- Select the file(s) and hit **Delete** icon
- Or right-click on the file and use **Delete** option from the drop-down menu
- Once done, the confirmation window will pop-up
- The deleted files are moved to the system **.trash** folder. If you wish to remove the file(s) permanently, check-mark **Skip the trash and permanently delete the files** option

NOTE: The files will be stored in the trash folder for 90 days. After that, they will be removed from the server automatically.

8. To **Restore** a file:

- Go to **File Manager**
- Navigate to **.trash** folder in **/home/user/** directory
- Select the needed file(s) and hit **Restore** icon
- Or right-click on the file and use **Restore** option from the drop-down menu
- Once done, the confirmation window will pop-up

9. To **Rename** a file:

- Go **File Manager**
- Navigate to the folder where the file(s) you wish to rename is located
- Select the file(s) and hit **Rename** icon
- Or right-click on the file and use **Rename** option from the drop-down menu
- Once done, the confirmation window will pop-up

10. To **Edit** a file:

- Go **File Manager**
- Select the file you wish to edit and hit one of **Edit** icons
- Or right-click on the file and use **Edit/HTML Editor** from the drop-down menu
- Choose one of the three following editors from the pop-up menu:

Edit: this editor will edit a document as code and give line numbers down the side of the editor. You can highlight your code with color by using the syntax drop-down menu and selecting the code you are working with

HTML Editor: this editor will edit a document as an HTML document. In this editor, you can also switch between design view (as a text document), source view (through the html code itself), or a preview mode (view the page through the web) by selecting the appropriate tab in the bottom left of the editor

11. To **Compress** a file:

It is useful to store a group of files in one file for an easy backup or for a transfer to another directory as well as compress large files. Compressed files take up less disk space and are downloaded faster via the Internet. The data can be compressed into a single *.zip, *.Gz, or *.Bz2 archive.

- Go to **File Manager**
- Select the files/directories you wish to compress and hit **Compress** icon
- Define **Compression Type** and enter the **name** of the archive
- Once done, hit **Compress File(s)**

12. To **Extract** a file:

- Go to **File Manager**
- Select the file you wish to uncompress
- Hit **Extract** icon
- Or right-click on the file and use **Extract** option
- Define the **path** you wish to extract the file to
- Once done, hit **Extract File(s)**

13. To change **Permissions** for a file:

- Go **File Manager**
- Select the file/folder you wish to change permissions for and hit **Permissions** icon
- Or right-click on the file/folder and use **Change Permissions** option from the drop-down menu

Set the needed value and hit Change Permissions

SSL Certificate Support

CSR Generation 3

How to Generate a CSR for Microsoft IIS 10

The following instructions will guide you through the CSR generation process on Microsoft IIS 10. To learn more about CSRs and the importance of your private key. If you already generated the CSR and received your trusted SSL certificate, reference our IIS 10 SSL Installation Instructions and disregard the steps below.

1. Access Server in IIS

Launch IIS Manager and click the server name in the Connections menu on the left.

2. Access Server Certificates Manager

On the Home page for the server, locate the IIS section in the center window and double-click Server Certificates. The Server Certificates control panel will open in the center window.

3. Create Certificate Request

- i. In the right-side **Actions** menu, click **Create Certificate Request...** The **Request Certificate wizard** will open in a new window.
- ii. Fill out the **Distinguished Name Properties**:

Common name: Must be a fully-qualified domain name (FQDN) like “domain.com”.

Organization: Your organization’s legal name. If you do not have a company or organization, you can put another name or N/A here.

Organizational unit: Your department within your organization. If you do not have an organization, put N/A.

City/locality: Your city.

State/province: Your state or region. This information must not be abbreviated, for example you must use “Florida” instead of “FL”.

Country: Your country (select from drop-down list).

Click **Next** when you are ready to proceed.

4. Cryptographic Service Provider Properties

On the Cryptographic Service Provider Properties page, select the following options from the drop-down menus:

Cryptographic service provider: Microsoft RSA SChannel Cryptographic Provider

Bit length: 2048

These are the standard options, but you may be able to select different options if needed.

5. File Name

On the File Name page, click the ... box to specify a name and location to save your CSR file. The default directory is C:\Windows\System32. Click **Finish** when you are ready.

6. Locate CSR on your system

Navigate to the directory where you saved your CSR file and open the CSR in Notepad or your preferred text editor.

7. Generate your SSL Certificate

Return to the Generation Form on our website and paste the entire CSR into the blank text box. Then, proceed with the remainder of the order form and submit when you are ready.

How to Generate a CSR for cPanel 11.x

The following instructions will guide you through the CSR generation process on cPanel .

1. Log In

Log in to **cPanel**, this can typically be accessed by going to **https://domain.com:2083**.

Note: You may encounter error message “Your connection is not private” or something similar when attempting to visit your cPanel login page. This is caused du

Enter your Username/Password and click **Log in**.

2. Navigate to cPanel Home

View your **cPanel Home** page.

Note: Older versions such as X3 Theme-Classic may not look like the image above, but should still contain the same concept and category structure.

3. Navigate to the SSL/TLS Manager

Navigate to the **SSL/TLS Manager** page by scrolling down to the **Security** section and select the **SSL/TLS** button.

Note: You can also navigate to the **SSL/TLS Manager** page by utilizing the **Search Feature** at the top right of the **cPanel** home page and searching “**SSL**”.

Your **SSL/TLS Manager** page will allow you to manage everything related to **SSL/TLS** configuration for **cPanel**.

4. Select **Generate** view, **upload**, or **delete** **SSL** certificate signing requests.

Fill out the **Request Form** and click **Creat**

Note 1: By default, **cPanel** will automatically generate the corresponding private key if “**Generate a new 2,048 bit key**” is selected as the **Key** option. If you already have a private key created that you wish to use, select the **Key** dropdown and select the appropriate option.

Note 2: **cPanel** does not require a passphrase for your **CSR**, but does recommend inputting a description such as “**CSR for www.google.com 9/13/2016**” that helps distinguish this **CSR** going forward.

5. Generate the order

Congratulations, you have created a **CSR** and automatically saved it in your user directory.

Click into the **Encoded Certificate Signing Request** text box that’s presented after generation, and copy all of the text including:

-----BEGIN CERTIFICATE REQUEST-----

And

-----END CERTIFICATE REQUEST-----

Return to the **Generation Form** back on our website and paste the entire **CSR** into the blank text box and continue with completing the generation process.

How to generate the CSR for plesk control panel

To generate a Certificate Signing Request for your site, follow these steps:

1. Log in to Plesk.
2. In the left sidebar, click Websites & Domains:
3. Click SSL/TLS Certificates:
4. Click Add SSL/TLS Certificate:
5. On the Add SSL/TLS Certificate page, complete the fields in the request form, and then click Request.

Most of the fields in the request form are self-explanatory, but a few fields require special attention:

- **Certificate name:** This is how the certificate is displayed in Plesk. To make it easy to identify later, you should use the domain name.
 - **Domain name:** If you want your SSL certificate to protect the domain with and without the www prefix, you must type *www*, for example, *www.example.com*.
 - A certificate for *www.example.com* protects both *example.com* and *www.example.com*.
 - A certificate for *example.com* only protects *example.com*.
 - **Email:** Plesk sends the CSR to this e-mail address.
6. The SSL Certificates page for the domain appears. Click the certificate name:
 7. Scroll down to the CSR section, and then copy all of the text, including the **BEGIN CERTIFICATE REQUEST** and **END CERTIFICATE REQUEST** headers:

General 1

What's the difference between DV, OV & EV SSL certificates?

Domain Validation (DV)

DV or a Domain Validated Certificate is a certificate that only requires you to verify that you are the owner of your domain. This occurs by receiving an email that is sent to the WHOIS information or email addresses belonging to that domain to verify that you own the rights to use the domain. This happens immediately for fast issuance, but sometimes lacks trust because almost anyone can get a DV certificate issued.

Organizational Validation (OV)

For Organization Validated (OV) Certificates, the issuing Certificate Authority (CA) validates your organization information to make sure you are an actual organization. They verify the Organization Name, Physical Address, and Phone Number. This data must match with the WHOIS information and also a public Government Information website or an approved Third-Party Website before being issued. OV certificates add more trust to a consumer because they are assured that they are doing business with a real corporate entity.

Extended Validation (EV)

EV or Extended Validation Certificates (also known as “Green Bar” Certificates) are recognized and known as the most highly trusted type of SSL certificate. During the EV verification process, the issuing vendor or CA totally verifies that you are a legitimate business and in good standing above and beyond an OV verification process. Once this process is successfully completed and your EV SSL is issued, all of the browser indicators will be activated on your site to let your customers know that you can be trusted. The most important indicator that becomes active is the “Green Bar” in a user’s web browser. Research shows that people are aware of the green bar and view it as being trustworthy. EV certificates are the only certificates where potential ROI exists...because more trust means more confidence; which could mean they are more likely to buy from you.

Installation

How to Install an SSL/TLS Certificate In cPanel 11.x

What You'll Need

1. Your server certificate

This is the certificate you received from the CA for your domain. You may have been sent this via email. If not, you can download it by visiting your Account Dashboard and clicking on your order.

2. Your intermediate certificates

These files allow the devices connecting to your server to identify the issuing CA. There may be more than one of these certificates. If you got your certificate in a ZIP folder, it should also contain the Intermediate certificate(s), which is sometimes referred to as a CA Bundle.

3. Your private key

This file should be on your server, or in your possession if you generated your CSR from a free generator tool. On certain platforms, such as Microsoft IIS, the private key is not immediately visible to you but the server is keeping track of it.

Installation Instructions

1. Log in to cPanel

The first step is to login to your **cPanel account**, this can typically be accessed by going to **https://domain.com:2083**

Note: You may encounter an error message “Your connection is not private” or something similar when attempting to visit your cPanel login page. This is caused due to your login page using a self-signed certificate by default. Please disregard this and proceed past the error message.

After navigating to your cPanel login page, enter your Username/Password and click **Log in**.

Your **cPanel Homepage** should look like this:

Note: Older versions such as X3 Theme-Classic may not look like the image above, but should still contain the same concept and category structure.

2. Navigate to the SSL/TLS Manager

You can access your **SSL/TLS Manager** page by scrolling down to the **Security** section and selecting the **SSL/TLS** button.

Note: You can also navigate to the SSL/TLS Manager page by utilizing the Search Feature at the top right of the cPanel home page and searching for “SSL”.

3. Select “Manage SSL Sites”

Your **SSL/TLS Manager** page will allow you to manage everything related to SSL/TLS configuration for cPanel. The “**Manage SSL Sites**” Hyperlink is located underneath “Install and Manage SSL for your site (HTTPS)” shown below.

4. Select your domain

Change the **Domain** drop-down to the appropriate domain name that you want to install your SSL certificate on.

5. Copy and paste your certificate files

Once you have your domain selected, you just need to copy and paste your individual certificate files into the appropriate text box(s) pictured below.

1. **Certificate (CRT)** – This is your server certificate that was issued to your domain(s). **Note 1:** cPanel should automatically fetch the Certificate (CRT) text if you previously uploaded the server certificate in the “Generate, view, upload or delete SSL certificate” section of your SSL/TLS Manager and selected the correct domain name above in the dropdown. **Note 2:** If you received the certificate in a ZIP file, click “Extract All” and then drag your server certificate into a text editor such as Notepad. This will allow you to copy all text contents needed including “—BEGIN CERTIFICATE—” and “END CERTIFICATE—”.
2. **Private Key (KEY)** – This is your private key that was created during the generation process. **Note 1:** cPanel should automatically fetch the Private Key (Key) text if you previously created the Certificate Signing Request (CSR) in the “Generate, view, or delete SSL certificate signing requests” section of your SSL/TLS Manager and selected the correct domain name above in the dropdown. **Note 2:** If you made the CSR and private key outside of your cPanel account and failed to save the files, you will have problems proceeding and may need to re-issue the SSL certificate with a newly created key pair.
3. **Certificate Authority Bundle (CABundle)** – This is your intermediate certificates that allow browsers and devices to understand who issued your trusted certificate. **Note 1:** cPanel should automatically fetch the CA Bundle from a public repository.

4. **Note 2:** If you have multiple intermediate certificates, paste each of them one after another to create the correct certificate chain/path.

6. Click “Install Certificate”

Once you have the correct certificate files in the appropriate text boxes, simply click the blue “Install Certificate” button.

Congratulations! You’ve successfully installed your SSL certificate! To check your work, visit the website in your browser at <https://yourdomain.tld> and view the certificate/site information to see if HTTPS/SSL is working properly.

How to Install a TLS/SSL Certificate In Microsoft IIS 10

What You'll Need

1. Your server certificate

This is the certificate you received from the CA for your domain. You may have been sent this via email. If not, you can download it by visiting your Account Dashboard and clicking on your order.

2. Your intermediate certificates

These files allow the devices connecting to your server to identify the issuing CA. There may be more than one of these certificates. If you got your certificate in a ZIP folder, it should also contain the Intermediate certificate(s), which is sometimes referred to as a CA Bundle. If not, download the appropriate CA Bundle for your certificate.

3. Your private key

This file should be on your server, or in your possession if you generated your CSR from a free generator tool. On certain platforms, such as Microsoft IIS, the private key is not immediately visible to you but the server is keeping track of it.

Installation Instructions

1. Access Server in IIS

Launch IIS Manager and click the server name in the **Connections** menu on the left.

2. Open Server Certificates Manager

On the **Home** page for the server, locate the **IIS** section in the center window and double-click **Server Certificates**. The **Server Certificates** control panel will open in the center window.

3. Open Complete Certificate Request Wizard

On the **Actions** menu on the right, click **Complete Certificate Request...** The **Complete Certificate Request wizard** will open in a new window.

4. Specify Certificate Authority Response

- i. Click the ... button to locate your certificate on your PC and add it into IIS.
- ii. The **Friendly Name** should be something that helps you easily identify the certificate, such as the domain name, certificate authority, and expiration date, i.e. "domain.com Sectigo 12/25/2020"

- iii. Finally, select **Web Hosting** as the certificate store and click OK to import your certificate.

5. Set Certificate Bindings

- i. Return to the server home page in IIS. In the left-side **Connections** menu, expand **Sites** and then click on the site that needs the SSL installed.
- ii. On the **Home** page for the website, in the right-side **Actions** menu, locate **Edit Site** and click **Bindings...** The **Site Bindings** window will open.
- iii. If you are installing an SSL certificate for the first time, click **Add** to create a new binding. If you are replacing an old certificate, click the existing binding and then click **Edit**.
- iv. In the **Add Site Bindings** window, select the following:

Type: https

IP Address: Select your site's IP Address or All Unassigned.

Port: 443

Host Name: Not required for single name certificate installation.

If you are installing more than one certificate, or installing the certificate on more than one website, enter the host name (domain) that you want to secure and check the box to Require Server Name Indication.

SSL Certificate: Select your site's certificate from the drop-down menu.

When all settings are configured, click **OK**.

Your certificate should now be installed. You can navigate to your site in a web browser to check for the padlock.

How to Install an SSL/TLS Certificate In Plesk v.11, 12, & 12.5

What You'll Need

1. Your server certificate

This is the certificate you received from the CA for your domain. You may have been sent this via email. If not, you can download it by visiting your Account Dashboard and clicking on your order.

2. Your intermediate certificates

These files allow the devices connecting to your server to identify the issuing CA. There may be more than one of these certificates. If you got your certificate in a ZIP folder, it should also contain the Intermediate certificate(s), which is sometimes referred to as a CA Bundle.

3. Your private key

This file should be on your server, or in your possession if you generated your CSR from a free generator tool. On certain platforms, such as Microsoft IIS, the private key is not immediately visible to you but the server is keeping track of it.

Installation Instructions

1. Log in to Plesk

Log in to Plesk, this can typically be accessed by going to **https://domain.com:8443**.

2. Click Website & Domains

In the **Power User View**, click **Websites & Domains** in the top navigation menu.

3. Navigate to the correct Domain

Navigate to the correct **Domain Name** by scrolling down and click **Show More**.

4. Select Secure Your Sites

Select **Secure Your Sites** as shown below.

5. Click your Certificate Name

Click the **Certificate Name** associated with your previously created Certificate Signing Request (CSR).

6. Upload the Certificate Files

Upload the **Certificate Files** using either one of the two methods below:

1. **Upload the certificate files** – This option will allow you to browse for your previously saved **Certificate** (Your Server Certificate) and **CA Certificate** (Intermediate Certificates).
2. **Upload the certificate as text** – This option will allow you to copy your previously saved **Certificate** (Your Server Certificate) and **CA Certificate** (Intermediate Certificates) from a text editor such as Notepad and paste into the blank text boxes.**Note 1:** If you received the certificate in a ZIP file, click “Extract All” and then drag your server certificate into a text editor such as Notepad. This will allow you to copy all text contents needed including “—BEGIN CERTIFICATE—” and “END CERTIFICATE—”. **Note 2:** If you forgot to save the intermediate certificates, download the appropriate CA Bundle for your certificate.

7. Click Send Files or Send Text

Depending on the option you chose in Step 6. Click either **Send Files** or **Send Text**.

8. Return to the Power User View

Return to the **Power User View**, click **Websites & Domains**, select your **Domain Name**, and click **Show More**.

9. Click Hosting Settings

Click **Hosting Settings** in the options menu that appears after you select **Show More**

10. Check SSL Support

Check the option for **SSL Support** and select your newly uploaded **Certificate Name** in the Certificate drop-down menu.

11. Click OK

Scroll down and click **OK**.

Congratulations! You’ve successfully installed your SSL certificate! To check your work, visit the website in your browser at <https://yourdomain.tld> and view the certificate/site information to see if HTTPS/SSL is working properly. Remember, you may need to restart your server for changes to take effect.

Windows Web Hosting

Enabling DKIM Email Signing

To enable DKIM signing of outgoing mail for a domain:

1. Go to **Websites & Domains** > your domain > the “Mail” tab > **Mail Settings**.
2. Select the “Use DKIM spam protection system to sign outgoing email messages” checkbox and then click **Apply**.

If you use the Plesk DNS server, you have enabled DKIM for the domain. Plesk adds the following two records to the DNS zone of the domain (*example.com* stands for your domain name):

- default._domainkey.example.com contains the public part of the generated key.
- _domainkey.example.com contains the DKIM policy. You can edit this policy.

If you use an external DNS server, you have one more step left. Plesk cannot add the DNS records to the external DNS server. Add them yourself using a hint from Plesk.

3. Click “How to configure external DNS” to open the hint. Copy two DNS records you see there and add them to the DNS server.

Note: If you have domain aliases you use to send mail, add the DKIM DNS records for them as well. Use the same records as for the main domain but with the domain alias name.

How to Access the webmail in windows hosting?

Access from Webmail

To access your mailbox through webmail, do any of the following:

- In a Web browser, visit the URL mail.example.com/webmail, where example.com is the name of the website. In the login screen, specify your full email address as the username (for example, mail@example.com), and specify the email address password.
- When logged in to Plesk, go to **Mail**, and in the list of email addresses, click an icon corresponding to the email address you need.

How to create EMails in the Plesk control panel?

To create an email address:

1. Login to the control panel at cp.example.com
2. Go to **Mail**.
3. Click **Create Email Address**.
4. Type the left part of the email address before the @ sign, and, if you have several domain names on your account, select the domain name under which the email address will be created.
5. Leave the **Mailbox** checkbox selected. Clearing this checkbox makes sense only if you want to use this address as a mail forwarder, which will forward all incoming mail to another address.
6. Specify the mailbox size or use the default size defined by the provider's policy or your service plan.
7. Specify a password consisting of eight or more Latin characters, capital letters, small letters, special characters and numbers.
8. Click **OK**.

(Account and Login Issues)

If a customer forgets their password, they can use the Forgot Password link on the login page to receive a reset email. Email changes require confirming the new address before the change takes effect, for security reasons. Accounts get suspended if payments are significantly overdue, and can be reactivated by contacting billing.

مشاكل الحساب وتسجيل الدخول

إذا نسي العميل كلمة المرور الخاص به، بإمكانه استخدام رابط "نسيت كلمة المرور" في صفحة تسجيل الدخول لتلقي بريد إلكتروني لإعادة تعيينها. وتتطلب عملية تغيير البريد الإلكتروني تأكيد العنوان الجديد قبل تطبيق التغيير لأسباب أمنية، بينما تتعرض الحسابات للإيقاف في حال تأخر المدفوعات بشكل ملحوظ، ويمكن إعادة تفعيلها عبر التواصل مع قسم الفواتير.

Secure SSL

1. Comodo EV Multi-Domain

- Flexibility is crucial when it comes to managing multiple sites, which is where this Extended Validation (EV) certificate comes in. By offering features such as 256-bit encryption, the green address bar, SAN support (up to 100 additional domains), and the Comodo Secured Seal, all visitors will be aware of and appreciate the level of protection offered. [View Full Product Details](#)
- Cost Starting from 3,165.00 SAR Annually

2. Comodo PositiveSSL Multi-Domain Wildcard

- Save yourself the time of managing numerous SSL certificates in attempt to secure your website's multiple domains and sub-domains with Comodo's new PositiveSSL Multiple Domain Wildcard certificate. While the Wildcard lets you secure an unlimited number of sub-domains, the SAN element in the certificate lets you protect multiple host names with a single certificate. Absolutely economical and reliable, this unique certificate is an ideal solution for securing e-commerce websites, payment pages, mail servers, intranets/ extranets, web applications etc. It's Domain Validated (DV) and offers 99.9% browser and mobile phone compatibility. [View Full Product Details](#)
- Cost : Starting from 1,520.00 SAR Annually

3. InstantSSL (OV)

- This security product is ideal for light ecommerce sites interested in boosting their trust quickly and affordably. This certificate will not only encrypt information sent from browsers to your server, but will also increase the trust visitors have in your website. [View Full Product Details](#)
- Cost 300.00 SAR Annually

4. Comodo PositiveSSL

- For a fast website security solution, the Comodo Positive SSL certificate is the answer for you. This domain validated (DV) certificate offers industry standard encryption at an unbelievable price. Plus, this certificate comes backed by the Comodo brand, one of the most trusted names in internet security. As a basic SSL certificate, the Comodo PositiveSSL is an excellent solution for internal domains and other domain names where you need fast and simple security without having to worry about injecting much trust into the site. [View Full Product Details](#)
- Cost 200.00 SAR Annually

5 Comodo PositiveSSL Wildcard

- Looking for a way to quickly and easily get the valued "https" displayed on a main domain and all of your subdomains? Then the Comodo PositiveSSL Wildcard is the certificate for you. Speed and reliability are two adjectives that come to mind when describing this certificate. That's because this wildcard certificate is a basic, Domain Validated (DV) certificate and can be issued in mere minutes. Also, with 99.3% browser recognition and solid mobile compatibility, the Comodo Positive SSL Wildcard can be relied on by most light ecommerce websites. [View Full Product Details](#)
- Cost 600.00 SAR Annually

6.Comodo SSL Certificate (DV)

- This domain validated certificate can be issued in minutes. On top of encryption, this certificate will show your customers that your site has been vetted by a leading internet security specialist, so they'll know it's safe to do business with you. This certificate comes with dynamic site seal and unlimited server licensing. [View Full Product Details](#)
- Cost 500.00 SAR Annually

7. Comodo Wildcard SSL Certificate (DV)

- Are you looking to secure a domain and all subdomains? If so, the Comodo Wildcard SSL certificate is an excellent option. With just one certificate, you can cover your main domain and as many subdomains as you need (mail.domain.com, billing.domain.com, etc.domain.com). Also, because this is a Domain Validated (DV) certificate, the Comodo Wildcard SSL can be issued in as little as a few minutes. One of the easiest and most economical Wildcard options, this certificate is perfect for small to medium sized businesses and lower-traffic ecommerce sites. [View Full Product Details](#)
- Cost : 1,200.00 Annually

8. Comodo Unified Communications Certificate

This single SSL certificate can provide secured communications on many different domains, both internal and external, which will reduce the complexity of your server security administration, along with reducing cost. [View Full Product Details](#)

- Cost Starting from 1,000.00 SAR Annually

9. Comodo Domain Validated UCC SSL

- As a Unified Communications certificate, this product has been designed exclusively for Microsoft Exchange 2010 as well as Office Communications Server 2007. This certificate also offers SAN support, a static site seal and unlimited server licensing. [View Full Product Details](#)
- Cost Starting from 750.00 SAR Annually

10 Comodo EV SSL

- In addition to the green address bar, this certificate features a HackerGuardian Vulnerability Scan, a free site seal free PCI scanning, free daily website scanning, a post-install health check, and the "point-to-verify" Comodo trustmark. This EV certificate offers tremendous value for your dollar. [View Full Product Details](#)
- Cost 1,950.00 SAR Annually
